Figure S1. A field preference experiment was done from the 14th of October 2016 till the 22nd of December 2017, the preference for strawberries (over ACV) in relation with the mean relative humidity during the trapping interval is depicted. Dots are the estimated values from the model, triangles the actual observations. The line is a local regression line (LOESS) and does not represent the underlying logistic function.
Figure S2. A field preference experiment was done from the 14th of October 2016 till the 22nd of December 2017, the preference for strawberries (over ACV) in relation with the mean daylength during the trapping interval is depicted. Dots are the estimated values from the model, triangles the actual observations. The line is a local regression line (LOESS) and does not represent the underlying logistic function.

Table S1. Mean responsiveness (%) ± SD of *D. suzukii* in olfactometer experiments for each treatment/status and each assessment time (3, 6 and 24 hours).

| Experiment cluster | Treatment/ Status | Responsiveness (%) Females | Responsiveness (%) Males | n |
