**H.pylori Management/ Diagnosis Study**

In 2016, the European and North American Societies of Pediatric Gastroenterology and Nutrition published new guidelines on the management of *H.pylori* infection in children. The aim of this study is to investigate the general practitioner's screening practices and management of a child with *H.pylori* disease. After you complete the survey, we will provide you with a summary of the *H.pylori* management recommendation. Participation in the survey is anonymous and completely voluntary. It should take you less than 5 minutes to complete the survey. Thank you for your participation.

1) What kind of provider are you?
   - Physician
   - Advance PracticeProvider

2) How many years have you been in practice?
   - <5 years
   - 5-10 years
   - >10 years

3) Which gender do you identify with?
   - Female
   - Male
   - Other

4) When you are considering a diagnosis of *H.pylori*, what testing do you perform?
   - Blood serology
   - Urine serology
   - Stool antigen testing for *H.pylori*
   - Urea Breath test
   - None of the above

5) How confident are you in diagnostic tests for *H.pylori*?
   - Not Confident at All
   - Minimally Confident
   - Neutral
   - Somewhat Confident
   - Extremely Confident

6) (ONLY GIVEN IF STOOL ANTIGEN CHECKED OFF) If you perform a *H. pylori* stool antigen test, how often is your patient taking a proton pump inhibitor?
   - <5%
   - 5-25%
   - 25-50%
   - 50-75%
   - 75-95%
   - >95%

7) If you diagnose *H.pylori*, how often do you refer to GI?
   - <5%
   - 5-25%
   - 25-50%
   - 50-75%
   - 75-95%
   - >95%

8) If you diagnose and treat *H.pylori*, which of the following antibiotics do you typically use for first line treatment? (Choose 2)
   - Amoxicillin
   - Metronidazole
   - Clarithromycin
   - Levofloxacin
   - Tetracycline
   - Ceftriaxone
   - Cefdinir

9) How confident are you in this answer?
   - Not Confident at All
   - Minimally Confident
   - Neutral
   - Somewhat Confident
   - Extremely Confident

10) What resources or references do you use to guide selection of medications and dosing?
    - UpToDate
    - Google
    - Redbook
    - Medical Society Guidelines
    - Other_______________

11) When *H. pylori* sensitivities are not known, what is the recommended dose of amoxicillin in the treatment of *H.pylori* in a 20 kg child?
    - 250 mg twice a day
    - 500 mg twice a day
    - 750 mg twice a day
    - 1500 mg twice a day

12) How confident are you in this answer?
    - Not Confident at All
    - Minimally Confident
    - Neutral
    - Somewhat Confident
    - Extremely Confident

13) How do you assess cure of *H.pylori*?
    - Based on resolution of symptoms
    - Repeat stool antigen testing
    - Repeat blood serology
    - Repeat urine serology
    - Repeat urease breath testing
