Supplemental Figure 1: Putative GlActin interactors with non-specific localization or low signal

Five proteins had non-specific localization, including faint cytoplasmic localization in GL50803_7323, GL50803_10429, and GL50803_10038. GL50803_6242 and GL50803_16522 were distributed throughout the cytoplasm. Scale bar, 5 µm.
Supplemental Figure 2: Range of mitosome-like localizations in marginal plate proteins

The marginal plate proteins GL50803_17153, GL50803_4383, and GL50803_115478 all localized to axoneme-associated structures which vary in number.
