advancement would be a better means to ascertain which persons are at higher risk for becoming hypertensive beforehand. To that end, there have been a number of studies showing that certain dermatoglyphic markers are associated with hypertension.

**Dermatoglyphics in hypertension: a review.** - Abstract ...
Dermatoglyphics in hypertension: a review. Buddhika TB Wijerathne. 1*, Robert J Meier. 2, Thilini C Agampodi. 3. and Suneth B Agampodi. 3. Abstract. Hypertension is a major contributor to the ...

**Can Dermatoglyphics be useful in screening of hypertension ...**
Fingerprints studied by dermatoglyphics are unique for a given individual. It depends on the genetic makeup of an individual. Hypertension, a harbinger of many complications, is determined by genetic and environmental factors. In this observational study, we tried to find an association of palmar dermatoglyphic parameters and hypertension.

**A “Handy” tool for hypertension prediction: Dermatoglyphics**
We determined the palmar and digital dermatoglyphic features of 165 black Malawian patients with diabetes mellitus and hypertension, aged 25–66 years attending the medical outpatient clinics at Lilongwe and Queen Elizabeth Central Hospitals by analyzing their total finger ridge count (TFRC), pattern intensity index (PII), atd angle and a–b ridge counts and compared these parameters with ...

**Dermatoglyphics in kidney diseases: a review ...**
Diagnosis of Diabetes Mellitus, Schizophrenia, hypertension, etc. can now be aided by dermatoglyphic analysis. 6 In dentistry, dermatoglyphics have been studied to help predict disorders like cleft lip and cleft palate, dental caries, malocclusion, congenital anomalies like ectodermal dysplasia, gingival fibromatosis, periodontitis, bruxismium ...
