Acknowledgements

I owe my gratitude to the numerous persons who have contributed towards this work, my training and career over the years.

The patients and persons in Uganda who have participated in this research, specifically at Mulago hospital, the tuberculosis wards and clinics, The AIDS Support Organization, AIDS Information Center, Infectious Disease Institute, Kampala City Council Clinics and the Kawempe division community as a whole. These patients and persons who willingly contributed towards this work for the benefit of human kind are highly appreciated.

Mentors are an important aspect of career development, and my gratitude to my many mentors. Prof Roy Mugerwa for his guidance and encouragement towards the discipline of immunology. He was always willing to listen and advise me, sometimes pushing me beyond my own expectations. Prof Jerry Ellner, from the time I met him on the steps of the tuberculosis clinics in 1993, he believed in me, encouraged me, and provided guidance in research. He has always been available to offer advice and listen to my thoughts and provide invaluable ideas and direction. He offered me an opportunity towards my initial training and research in immunology; providing me the option of using resources at the Tuberculosis Research Unit and immunology laboratories at Case Western Reserve University as well as the Uganda research laboratories.

My utmost gratitude goes to Prof Zahra Toossi. She introduced me to laboratory work and gently guided me in the initial stages where I seemed to be making more errors than progress. She was tolerant when I repeated experiments over and over again, guided me in scientific writing and thinking, always prodding and encouraging me to do more. I owe a great part of this work to her support, guidance, motivation and encouragement.

Prof Christopher Whalen for the opportunity he offered me as an AIDS International Training and Research Program (AITRP) Fogarty scholar to train at Case Western Reserve University (CWRU). He set the pace for this work. After my Masters in immunology, he encouraged me to continue with research and training.

Prof Henry Boom; who provided guidance to me since the time of my Master’s studies. He was my dissertation supervisor who progressed to become a colleague in tuberculosis immunology research. He always believed in me as a person and the Ugandan people as a whole – reminding others that Ugandans are okay; they always deliver as needed. Thank you for supporting my research and academic career up to this time.
Prof John Johnson with his meticulous work approach and emphasis to detail, especially as I gained skills in tuberculosis clinical trials. I have learnt a lot from him in optimal and methodical management of tuberculosis clinical trials and how to always strive for perfection.

I am grateful to the various persons who assisted and trained me in both immunology assays and research principles. Dr Christina Hirsch who taught me various assays in the laboratory, and lead me to always aim for top quality work; Dr Hai Shao, Dr Theresa Hertgho - I thank you all Mr. Pierre Peters for his support and patience as he trained me in the early days of bench work. He would willingly stay behind after working hours to guide and assist me complete assays and helped in various aspects in the Uganda Joint clinical Research center (JCRC) immunology research laboratory. I am grateful to Ms Joy Baseke for her support over the years in the JCRC laboratory.

Prof Stephan Kaufmann at the Max Planck Institute for Infection Biology (MPIIB) in Berlin, for all that I have learnt from him in the area of tuberculosis biomarkers and related research. Prof Gerhard Walzl at Stellenbosch University (SUN) and Prof Willem Hanekom at the University of Cape Town - I have learnt a lot from both of you, and your interaction has boosted my confidence especially at times when I needed this moral boost.

The various colleagues and staff at the Uganda Case research clinic; Dr Alphonse Okwera, Dr Anne Wajja, Dr Henry Luzze, Dr Mary Nsereko, the nurses, counselors, home visitors, administrators and all the staff over the years. Their support and help has been invaluable and highly appreciated.

My utmost gratitude to Prof Joep Lange for the encouragement you gave me towards starting - and completing this work. My appreciation also goes to the staff at the Amsterdam Institute for Global Health and Development (AIGHD) foundation, the Academic Medical Center and the University of Amsterdam for all the support and cooperation. It was at the INTERACT meeting in Kigali, Rwanda where Nadine Pakkar and Kimberly Boer first mooted the idea of doctoral studies to me; the seed was planted and well watered to fruition; thank you.

I cannot forget my “sparring partners” colleagues with whom we have held discussions compared notes and encouraged each other over the years including Prof Moses Kamya, Prof Elly Katabira, Prof David Serwadda, Prof Fred Wabwire, Prof Phillipa Musoke and others. Prof Nelson Sewankambo, who has always given us space to develop while keeping his “finger on the pulse” he believed in, and encouraged all at the Makerere College of Health Sciences (MakCHS)
to develop academically, publish and conduct relevant research, treating every new publication as a success of not only the individual but the College of Health Sciences, and Makerere university a whole.

Lastly my utmost gratitude goes to my husband Dr Ian Kizza and children Diana, Doreen, Keith, Kevin and Jonathan. Ian has always shared in the joy of my successes, and encouraged me on towards the next step; the children for their tolerance as we all moved together along the academic path albeit at different levels. My siblings for their humorous closely knit relationship. My parents Mr. Morrison and Mrs. Ida Mayanja – from the beginning they instilled in us children the importance of education, something they considered as a major key to our future success. I dedicate this doctorate to both of them – they always knew I would make it. Thank you for all.
