Figure S1. Supplement effects of ALPS on CP-induced ROS (A) production and (B) loss of MTP in A549 cells. \(*\text{**} P<0.001\) vs. control group (one-way ANOVA, followed by Tukey's post-hoc test); \(*\text{**} P<0.01\) and \(*\text{***} P<0.001\) vs. cisplatin only-treated group (one-way ANOVA, followed by Tukey's post-hoc test). ALPS, *Annona muricata* leaf polysaccharides; CP, cisplatin; Con, control; ROS, reactive oxygen species; MTP, mitochondrial transmembrane potential; ns, not significant.
Figure S2. Supplement effects of ALPS on CP-induced ROS (A) production and (B) loss of MTPs in H460 cells. **P<0.01 vs. control group (one-way ANOVA, followed by Tukey's post-hoc test); ***P<0.001 vs. cisplatin only-treated group (one-way ANOVA, followed by Tukey's post-hoc test). ALPS, *Annona muricata* leaf polysaccharides; CP, cisplatin; Con, control; ROS, reactive oxygen species; MTP, mitochondrial transmembrane potential; ns, not significant.
