Participant characteristics

|                                | Measured at baseline (n=33) |
|--------------------------------|----------------------------|
| Age (median, range)            | 30 (20 to 40)               |
| Age when starting sex work (median, range) | 21 (13 to 37)             |
| Education (n)                  |                            |
| No formal                      | 3                          |
| Primary/Junior                 | 14                         |
| Secondary                      | 13                         |
| Vocational                     | 1                          |
| Tertiary                       | 2                          |
| Monthly income, USD$^1$ (n)    |                            |
| < $35                          | 9                          |
| $35 - $75                      | 4                          |
| $75 - $150                     | 15                         |
| > $150                         | 5                          |
| Timing of last HIV test (n)    |                            |
| 0-3 months                     | 0                          |
| >3-6 months                    | 14                         |
| >6-12 months                   | 7                          |
| >12 months                     | 10                         |
| Never tested                   | 2                          |
| Participants’ estimation of HIV prevalence |                    |
| Out of 10 FSW, estimated HIV-positive (median, range) | 6.5 (3 to 9) |
| Out of 10 clients, estimated HIV-positive (median, range) | 7 (2 to 10) |
| Number of clients/average night (median, range) | 5 (3 to 12) |
| Inconsistent condom use with clients$^2$ (n) | 17                          |
| Price for vaginal sex, USD$^1$ (median, range) |                    |
| With a condom                  | $3.00 ($0.90 to $15)       |
| Without a condom               | $6.00 ($3 to $30)          |

Measured at follow-up (n=32, as one participant was lost to follow-up)

|                                |                              |
|--------------------------------|------------------------------|
| Tested for HIV since the start of the study | 32                          |
| Used an HIV self-test           | 26                          |
| Self-tested HIV-positive over the course of the study | 4                           |

$^1$Price categories in US dollars (USD); October 10th, 2016 exchange rate (1 USD = 3363.85 Ugandan Shillings).
$^2$Defined as not using a condom with at least one client on an average working night.
