Abstract
Two new genera, *Brevishieldophyes* Chakrabarti & Pandit, gen. n. and *Mesoshieldophyes* Chakrabarti & Pandit, gen. n., and a new species *Mesoshieldophyes varecae* Chakrabarti & Pandit, sp. n., are described. These mites are leaf vagrants. The morphological characters of the afore-mentioned genera and those of *Ashieldophyes* Mohanasundaram are compared. A key for separating the genera within the subfamily Ashieldophyinae is provided. The diagnostic characters of the subfamily Ashieldophyinae are also revised.

Keywords
*Ashieldophyes*, *Brevishieldophyes* gen. n., comparison, descriptions, *Mesoshieldophyes* gen. n., *Mesoshieldophyes varecae* sp. n., *Brevishieldophyes glochidionae* comb. n.

Introduction

*Ashieldophyes pennadamensis* Mohanasundaram, 1984, infesting *Casearia tomentosa* Roxb. (Salicaceae) from near the Pennadam Sugar Factory, Arcot district, Tamil Nadu, south India, was the type species for the genus *Ashieldophyes* Mohanasundaram within the new family Ashieldophyidae Mohanasundaram. Later, the family Ashieldophyidae was made one of the subfamilies (Ashieldophyinae) of the Eriophyidae Nalepa (1898)
because a small prodorsal shield was actually observed on the propodosoma of the mite (Amrine and Stasny 1994; Amrine 1996; Amrine et al. 2003). A second species, *Ashieldophyes glochidionae* Chakrabarti & Pandit, 2009, infesting *Glochidion multiloculare* (Rottler ex Willd.) Voigt (Phyllanthaceae) from Lataguri Forest, Jalpaiguri, West Bengal, was described in this taxon.

During periodical samplings for exploration of eriophyoid mite diversity in West Bengal & Assam, further samples of eriophyoids infesting *Casearia vareca* Roxb. and *C. glomerata* Roxb. were collected. Examination of those specimens allowed establishing two new genera, *Mesoshieldophyes* Chakrabarti & Pandit, gen. n. for accommodating *Mesoshieldophyes varecae* Chakrabarti & Pandit, sp. n. and *Brevishieldophyes* Chakrabarti & Pandit, gen. n. for reassigning *A. glochidionae* in the Ashieldophyinae.

**Materials and methods**

Eriophyoid mites were collected and studied as described by Chakrabarti et al. (2017). The terminology and classification given by Lindquist (1996) and Amrine et al. (2003), respectively are followed here. The specimens were examined with a phase contrast Leica DM3000 microscope and photographs were taken with Leica DFC295 camera. All measurements were made following Amrine and Manson (1996) and de Lillo et al. (2010), and are given in micrometres (µm). Measurements and means are rounded off to the nearest integer and refer to the length of the morphological characters unless specified otherwise. Drawings were made following de Lillo et al. (2010) and Amrine et al. (2003). In the text, measurements of the holotype are followed by the range of measurements of the paratypes plus holotype given in parentheses. All type specimens are now deposited in the collection of the Post-Graduate Department of Zoology, Vidyasagar College, Kolkata 700006, India. After publication, holotypes and paratypes will be deposited in public institutions: one slide with paratypes of each species will be deposited to the National Pusa Collection, Indian Agricultural Research Institute, New Delhi; the holotype and the remaining paratypes will be deposited in the National Zoological Collection, Zoological Survey of India, Kolkata.

**Taxonomy**

*Ashieldophyes* Mohanasundaram, 1984
http://zoobank.org/9A73DBEB-3C29-44D3-89DF-B349D0C8F895

**Diagnosis.** Prodorsal shield small and oval shaped; scapular tubercles absent but with very short scapular setae *sc*, placed on lateral margins, directed laterally; pedipalp genual setae *d* present and simple; femoral setae *bv* of leg I present; genual setae *l*" of leg II present; coxae with setae *1b*; female genitalia located between coxae II; genital cover flap lacks ridges.
New genera, a new species, and a key to the genera of Ashieldophyinae...

Table 1. Data set for some morphological characters of *Ashieldophyes*, *Brevishieldophyes*, and *Mesoshieldophyes*.

| Characters                  | *Ashieldophyes* | *Brevishieldophyes* | *Mesoshieldophyes* |
|-----------------------------|------------------|---------------------|--------------------|
| Body                        | Vermiform        | Fusiform            | Fusiform           |
| Pedipalp genual setae *d*   | Present          | Present             | Absent             |
| Prodorsal shield            | Small, oval shaped | Small, sickle shaped | Semi-circular, comparatively larger. |
| Scapular tubercles          | Absent           | Absent              | Absent             |
| Scapular setae *sc*         | Present (very short) | Absent              | Absent             |
| Femoral setae *bv* on leg I | Present          | Present             | Absent             |
| Solenidion *ω*              | Blunt            | Knobbed             | knobbed            |
| genual seta *l"* on Leg II  | Present          | Present             | Absent             |
| Dorsal and ventral semiannuli | Equal number, smooth | Equal number, smooth | Equal number, granular |
| Seta *1b*                   | Present          | Absent              | Present            |

**Type species.** *Ashieldophyes pennadamensis* Mohanasundaram, 1984.

**Remarks.** *Ashieldophyes* Mohanasundaram, 1984, *Brevishieldophyes* Chakrabarti & Pandit, gen. n., and *Mesoshieldophyes* Chakrabarti & Pandit, gen. n. belong to the subfamily Ashieldophyinae of family Eriophyidae in having small or moderately developed shield, lacking opisthosomal setae *d* and *e*, coxae widely separated anteriorly, female genitalia appressed to the coxae and with a triangular cover flap. These three genera can easily be separated by the characters given in Table 1 and in the key provided below. The genus is monotypic.

*Ashieldophyes pennadamensis* Mohanasundaram, 1984
http://zoobank.org/D84AC07F-CD6A-42E1-9E42-EA6782545674
Fig. 1 AD1, CG1

*Ashieldophyes pennadamensis* Mohanasundaram, 1984, Oriental Insects, 18: 251–252.

**Diagnosis.** Body vermiform; pedipalp genual seta *d* present; prodorsal shield small and oval; scapular tubercles absent but with very short setae *sc*; legs with all usual setae; solenidion *ω* blunt; opisthosoma with equal number of smooth dorsal and ventral semiannuli; setae *1b* present.

**Description.** Female (n = 20). Body vermiform, brown colour in life, dorso-ventrally flattened; 250 (175–250) and 40 (39–46) wide. *Gnathosoma* 15 (14–15) projecting obliquely down-curved, dorsal pedipalp genual setae *d* 1 (1–2); chelicerae 13 (13–15). **Prodorsal shield** small, oval-shaped, without lobe, 9 (9–10) and 23 (22–23) wide, lacking scapular tubercles but with very short scapular setae *sc*, placed on lateral margin and directed laterally. **Leg I** from base of trochanter 20 (20–21), femur 7 (7–8), femoral setae *bv* 7 (7–8), genu 3 (2–3), genual setae *l"* 20 (21–23), tibia 5 (3–5), tibial setae *l' 15* (12–15), tarsus 5 (3–5), tarsal setae *fi' and fi"* both 12 (10–12), solenidion *ω* 4 (3–4), straight and blunt; empodium *em* simple, 4-rayed; setae *u' 2* (2–3). **Leg II**
from base of trochanter 18 (18–20); femur 6 (5–6), femoral setae bv 5 (5–6), genu 2 (2–3), genual setae l" 23 (20–23), tibia 3 (3–4), tibial setae l' absent, tarsus 4 (3–4), solenidion o 8 (7–8), straight and blunt; empodium em simple, 4-rayed; tarsal setae fi' 8 (8–10) and fi" 12 (10–12), setae u' 2 (2–3). Coxigenital area smooth; broadly joined, sternal line absent, coxa I widely separate, setae 1b 2 (2–3) and 5 (5–6) apart, setae 1a 8 (8–9) and 7 (7–8) apart, setae 2a 13 (13–15) and 18 (18–20) apart. Opisthosoma dorsally flat, smooth, with equal number of dorsal and ventral semiannuli, 21 (20–21); setae c2 10 (7–11) on ventral semiannulus 2 (2–3), setae d and e absent, setae f 14 (12–15) on ventral semiannulus 7 (6–7) from rear margin; setae h1 absent, setae h2 12 (12–14). Genital cover flap 10 (9–11) and 16 (17–18) wide, triangular and smooth; setae 3a 8 (6–8). Internal genitalia apodeme short, spermathecae rounded with short funnel-like spermathecal tubes.

Specimens examined. India: Tamil Nadu: South Arcot District, near Pennadam Sugar Factory, 16.VIII.1981, 2 females from C. tomentosa, coll. M. Mohanasundaram, coll. no. 427 (TNAU); West Bengal: North 24-Parganas, Madral, 12.VIII.2005, many females and nymphs from C. tomentosa, coll. R Pandit, coll. nos. 1182–1184/19/2005.

Distribution. India: Tamil Nadu & West Bengal.

Relation to the host plant. The mites inhabit the under surface of leaves as vagrants without showing symptoms of damage to the host plant.
Remarks. This species is so far known only from its type locality and here reported for the first time from West Bengal.

Brevishieldophyes Chakrabarti & Pandit, gen. n.
http://zoobank.org/16667767-867C-4329-A2F9-CF791F511F0B

Diagnosis. Body fusiform, dorso-ventrally flattened. Gnathosoma short, downwardly curved, cheliceral stylet short; prodorsal shield small and sickle-shaped; scapular tubercles and scapular setae sc lacking; pedipalp genual setae d present and simple; coxae without setae 1b; femoral setae bv of leg I present; genual setae l″ of leg II present; empodium simple; female genitalia appressed to the coxae, genital cover flap smooth, triangular, located between coxae II; apodeme normal in length.

Type species. Ashieldophyes glochidionae Chakrabarti & Pandit, 2009.

The genus is monotypic.

Etymology. Brevi derived from the adjective Latin word brevis meaning short (in relation to prodorsal shield) and ophyes derived from eriophyes meaning erion = wool + phyes = a grower/maker.

Gender. Masculine.

Brevishieldophyes glochidionae (Chakrabarti & Pandit, 2009), comb. n.
http://zoobank.org/33D1FFB7-997E-495E-AD21-EF1EDB27CB2B
Fig. 1AD2, CG2

Ashieldophyes glochidionae Chakrabarti & Pandit, 2009, International Journal of Acarology, 15:163–164.

Diagnosis. Body fusiform; pedipalp genual seta d present; prodorsal shield small and sickle shaped; scapular setae sc absent; legs with all usual setae; solenidion ω knobbed; opisthosoma with equal number of smooth dorsal and ventral semiannuli; setae 1b absent.

Specimens examined. India: West Bengal: Jalpaiguri, Lataguri forest, 15.X.2004, many females and nymphs from G. multiloculare, coll. R Pandit. coll. nos. 1275–1279/45/2004. Type material of A. glochidionae Meghalaya: Burnihat, 18.X.1985, many females and nymphs, from C. glomerata, coll. B Das, coll. nos. 967–971/61/1985.

Distribution. India: West Bengal & Meghalaya.

Relation to the host plant. The mites inhabit the under surface of leaves as vagrants without showing symptoms of damage to the host plant.

Remarks. The original report of B. glochidionae from G. multiloculare needs further confirmation because this mite species and other two Ashieldophyinae have been collected subsequently from plants of the genus Casearia (Salicaceae).
**Mesoshieldophyes Chakrabarti & Pandit, gen. n.**
http://zoobank.org/7227C05D-E910-44EE-AC65-49CACF572032

**Diagnosis.** Body fusiform, dorso-ventrally flattened. Gnathosoma short, obliquely down-curved, cheliceral stylet short; pedipalp genual setae \(d\) absent; prodorsal shield semi-circular without any lobe, lacking scapular tubercles and scapular setae \(sc\); femoral setae \(bv\) of leg I and genual setae \(l''\) of leg II absent; coxae with setae \(1b\); dorsal and ventral semiannuli with granules; female genitalia appressed to the coxae; genital cover flap triangular and smooth; empodium simple; apodeme short in length.

**Type species.** *Mesoshieldophyes varecae* Chakrabarti & Pandit, sp. n.
This genus is monotypic.

**Etymology.** The genus name *Mesoshieldophyes* is derived from meso = middle, referring to the medium size of prodorsal shield and phyes derived from eriophyes meaning erion = wool + phyes, a grower/maker.

**Gender.** Masculine.

**Remarks.** The size of the prodorsal shield in this genus is larger than that in the other two genera of this subfamily.

---

**Mesoshieldophyes varecae Chakrabarti & Pandit, sp. n.**
http://zoobank.org/E19A73E2-8A4C-4ABD-8C2F-4FC2DDFBC135
Figs 1AD3, CG3, 2, 3

**Diagnosis.** Body fusiform; pedipalp genual seta \(d\) absent; prodorsal shield semi-circular; scapular setae \(sc\) absent; femoral setae \(bv\) on leg I absent; genual setae \(l''\) on leg II absent; solenidion \(\omega\) knobbed; opisthosoma with equal number of granulated dorsal and ventral semiannuli; setae \(1b\) present.

**Description.** Female (n=12). Body fusiform, yellow colour in life, dorso-ventrally flattened; 140 (120–145) and 50 (45–50) wide. **Gnathosoma** 15 (14–15) projecting obliquely down-wards, dorsal pedipalp genual setae \(d\) absent, setae \(ep\) 1 (1–2); chelicerae 13 (13–15). **Prodorsal shield** semicircular, without lobe, 14 (18–20) and 43 (40–43) wide with granules, lacking scapular tubercles and setae \(sc\). **Leg I** from base of trochanter 20 (20–21), femur 7 (7–8), femoral setae \(bv\) absent, genu 3 (2–3), genual setae \(l''\) 20 (21–23), tibia 4 (3–4), tibial setae \(l'\) 10 (10–12), tarsus 5 (3–5), tarsal setae \(ft'\) and \(ft''\) both 12 (10–12), solenidion \(\omega\) 4 (3–4), straight and knobbed; empodium \(em\) 4 (4–5), simple, 4-rayed; setae \(u'\) 2 (2–3). **Leg II** from base of trochanter 18 (18–20); femur 6 (5–6), femoral setae \(bv\) 5 (5–6), genu 2 (2–3), genual setae \(l''\) absent, tibia 3 (3–4), tibial setae \(l'\) absent, tarsus 4 (3–4), tarsal setae \(ft'\) 8 (8–10), \(ft''\) 12 (10–12); solenidion \(\omega\) 8 (7–8), straight and knobbed; empodium \(em\) 4 (4–5), simple, 4-rayed; setae \(u'\) 2 (2–3). **Coxigenital area** smooth; sternal line absent, coxae widely separated, setae \(1b\) 2 (2–3) and 5 (5–6) apart, setae \(1a\) 8 (8–9) and 7 (7–8) apart, setae \(2a\) 13 (13–15) and 18 (18–20) apart. **Opisthosoma** dorsally flat, with equal number of dorsal and ventral semiannuli, 21 (20–21), both dorsal and ventral semiannuli ornamented with fine granules; setae \(c2\) 10 (7–11) on ventral semiannulus 2 (2–3), setae \(d\) and \(e\) absent,
New genera, a new species, and a key to the genera of Ashieldophyinae…

**Figure 2.** *Mesoshieldophyes varecae*, Female. Abbreviations CG coxigenital region D dorsal view of body; em empodium IG Internal genitalia LO Dorsal and ventral annuli.

setae $f_{14}$ (12–15) on ventral semiannulus 7 (6–7) from rear margin; setae $h_{1}$ absent, setae $h_{2}$ 12 (12–14). **Genital cover flap** 6 (5–6) and 16 (17–18) wide, triangular and smooth; setae $3a$ 7 (6–7). **Internal genitalia** apodeme short, spermathecae globose with short, funnel-like spermathecal tubes.

Male. Not observed.

**Type host plant.** *Casearia vareca* Roxb. (Salicaceae).

**Relation to the host plant.** The mites inhabit the under surface of leaves as va-grants without showing symptoms of damage to the host plant.

**Type locality.** India: West Bengal: Darjeeling, Bengdubi Forest (26°42'30.1"N, 88°25'36.7"E), 163 m above sea level, 03.II.2015, coll. S Chakrabarti, R Pandit, S Sarkar.
Type material. Holotype: female marked on slide (no. 1294/N11/2015); paratypes: 2 females on slide bearing holotype and 36 females, larvae and nymphs on 10 slides (nos. 1295–1304/N11/2015).

Etymology. The species name *varecae* is from the specific designation of the host plant in the genitive case.

Key to the genera of subfamily Ashieldophyinae

1. Body vermiform, scapular setae *sc* present; femoral setae *bv* on leg I and genu setae *l"* on leg II present, on Salicaceae .................................................. *Ashieldophyes* Mohanasundaram, 1984
   – Body fusiform, scapular setae *sc* lacking ............................................ 2
2. Prodorsal shield small, sickle shaped; coxal setae *lb* lacking; femoral setae *bv* on leg I and genu setae *l"* on leg II present, on Salicaceae & Phyllanthaceae .............. *Brevishieldophyes* Chakrabarti & Pandit, gen. n.
   – Prodorsal shield moderate, semicircular; coxal setae *lb* present; femoral setae *bv* of leg I and genu setae *l"* of leg II lacking, on Salicaceae ...................... ................................. *Mesoshieldophyes* Chakrabarti & Pandit, gen. n.
New genera, a new species, and a key to the genera of Ashieldophyinae...

Subfamily Ashieldophyinae Mohanasundaram (1984)

**Diagnosis.** Prodorsal shield poorly developed to moderately developed, lacking scapular tubercles, scapular setae sc absent but if present very short; sternal line absent; coxae widely separated anteriorly; legs with all segments, setae bv on leg I and genual setae l” on leg II may or may not be present; opisthosoma lacking setae d and e but c2 and f present; genitalia appressed to the coxae, genital cover flap triangular; genital apodeme curved and abbreviated and spermathecae globose with short spermathecal tubes.

**Acknowledgements**

Authors extend their thanks to Prof AP Das, Department of Botany, University of North Bengal for identification of the host plant, *Casearia vareca*. Thanks to the Ministry of Environment, Forest & Climate Change, Government of India, New Delhi [Grant no. 22018/05/2010-CS (Tax)] and to the University Grants Commission, New Delhi (Grant no. PSW-111/12-13 ERO) for partially financing the work. Authors (SC and SS) gives thanks to the Principal, Vidyasagar College, Kolkata and RP to the Principal, Mahadevananda Mahavidyalaya, Barrackpore for logistical support. The authors gratefully acknowledge the suggestions made by the reviewers, particularly Prof JW Amrine Jr for improving the earlier versions of this manuscript.
