1. Introduction
From time immemorial women have been working – working everywhere - at home, in fields, factories and many other workplaces. However, women as a distinct segment of workers emerged and got recognition only with the emergence of industrial production After the industrial revolution, the social situations changed throughout the world and so in India. The family no more remained a centre for production. Due to industrialization and urbanization new social norms and values emerged. Job opportunities, economic hardship and favorable cultural and social situation encouraged the women to seek employment outside the home. After independence of Country the number of women to come out of their houses for work increased day by day. They also took the education. In the early period women were mostly engaged in unskilled or semi-skilled occupations, as ayahs, nurses, mid wives, water women, cooks, domestic servants, as laborers on construction sites, in agricultural farm and on plantations. But now they are increasingly being employed in services, industries, shops, establishments, offices and professional / technical occupations. This change enhanced the status of women on the one hand and Country prosperity on the other, but it gave rise to many problems and difficulties for them by way of exploitation, discrimination and dismal working conditions. They have to perform dual responsibilities respectively termed “reproductive” and productive. This is not an easy task for women to work at home and working place. The problems and difficulties got multiplied due to their peculiar social, biological and psychological conditions and due to their illiteracy and ignorance.
