INTRODUCTION

In initial stage money was evolved on different stages like Commodity Money, Metallic Money, Paper Money. Money has evolved through different stages according to the time, place and circumstances. In recent times money has changed in different dimensions like credit card, debit card, deposits, overdraft, NEFT, RTGS, cheque. In current situation where whole world faced COVID-19 Pandemic people started giving preference to online payment. People started using online mobile apps like Google Pay, PhonePay and Paytm for making payments to others. Payment for different things like households expenses, rent etc. In education system like schools and colleges even online class center's also adopted online payment options for accepting payments but that was hectic for all people because they were unable to understand how to make online payments either they should have account and it should be register with banks and mostly people in Palghar were illiterate so they faced lots of issues while making online payments. I have chosen to study the impact of COVID-19 Pandemic on online payment with reference to degree college students in Palghar district. I have seen student’s problems when they were making payments and their parent’s situation. In this research paper, I will address all the benefits which students get from online system of payment and their issues which they faced while making payments.

ABSTRACT

Almost from 21st March 2020 to December 2020 whole world faced a major issue of COVID-19 pandemic. In these situation lots of people lost their jobs, they left their cities due to unavailability of basic necessities. There was lockdown everywhere for nearly 6 months. Some good things happened lots of bad things happened. People started online payment method because they were not able to give cash. I started research on this, after looking problems faced by degree college students for making payment because all colleges have adopted the method of online payment system as well as there was immediate need for cashless day to day life transactions which included groceries, green groceries, transportation, bill payments. There are some positive aspects of online system and some faced issues while making payment.

Key Words: Pandemic, COVID-19, Unavailability, Lockdown, Cashless.

Dependent Variable: Experience on online payment method

|   | Mean  | Std. Error | 95% Confidence Interval |
|---|-------|------------|-------------------------|
|   |       |            | Lower Bound | Upper Bound |
| N | 3.347 | .158       | 3.036       | 3.659       |

#### Analysis and Interpretation

In this research degree college students preferred payment first from Google Pay, Phone Pay, Net Banking and BHIM UPI. Students found online system is better because there is no need to deal with cash, even less chances of stolen of cash. So in this situation students find that online system is best but with this those are making online payment they have to make sure safety of their accounts and phone numbers, even password set up by them. Those are handling online payment system they have to be aware about their transactions. They find quite useful all this but when it comes to parents they prefer more for hard cash because of lack of trust on technology.

Online payment system became stronger in COVID-19 pandemic. It was useful to all peoples. People push strongly towards online system. They started learning how to make online payment.

The data provided by the National Payments Corporation of India (NPCI) shows that in September, transactions based on Unified Payments Interface (UPI) hit a volume of over 180 crores — nearly double the 99.9 crores volume recorded in April. Total transactions have additionally reached Rs. 3,29,027 crores. Platforms including Google Pay, Paytm, and PhonePe have also seen a significant increase in their adoption. And as a result, scams have also increased alongside.

**Figure 1:** UPI transactions volume has grown to 180.014 crores in September

#### Suggestions

1. Thought making online payment is easy because of payment system but due to lack of knowledge
about digital awareness. So awareness program should be there.
2. Peoples don’t know KYC procedures so lots of frauds are done by fraud people. So there is need to tell procedure to students and peoples.
3. There should be a system who will tell peoples about that procedure
4. Need to develop digital literacy.
5. Issuing advisories should be there

FINDINGS
1. Digital payment is a good system but literacy should be there.
2. Students parents find it difficult
3. Mind set was not ready to accept this system easily
4. Data and security issues
5. Fake calls and messages from fraud peoples.

CONCLUSION
After doing research on" A STUDY ON IMPACT OF COVID -19 PANDEMIC ON ONLINE PAYMENT WITH REFERENCE TO DEGREE COLLEGE STUDENTS IN PALGHAR DISTRICT" COVID-19 impacted on online system because almost 100% students has done online payment and they sometimes faced technical issues. Students parents find it difficult to make payment because they were having of keeping hard cash. This situation occurred unexpectedly so students and parents were not ready mentally to accept but gradually all issues resolved and now all are comfortable with online payment system out of 100% almost 80% students said that easy and simple but then also there is problem of security, so government has to work on this because all are ready to accept payment system but security and grievance cell should be there to resolve problems.
