Abstract. Health is important and it is a basic human need that must be maintained continuity and sustainability in terms of human health. Health is also closely linked to environmental issues that support to live healthily, if the environment is not supported by good health then basic human health will not be fulfilled. People who have a good environment will get good health as well. The question in this study is that dago geographical conditions that are geographically hilly must necessarily mean that the hills are well managed with respect to the green open space and forest aspects that must be maintained. What happens when it is not fulfilled, whether the public health aspect will be met well, which this question will be answered with a qualitative approach. The results of the study can be concluded that the condition of dago area is geographically densely populated area which makes the society very vulnerable in health can suffer chronic disease problem due to pollution and also the density of the population so that many waste and garbage affected by people in dago area.

1. Introduction
Environment in the context of health is provide a sense of bringing prosperity to the surrounding community that there is certainly provide nuance of existing health in the existing community [1]. Health and wellbeing is a very closely related to dimension and it has not only brought safety to the health of the nation. A clean environment will certainly be healthy body and mind. This should then be carefully understood by looking at two aspects of health and the environment that exist within the society. A good environment is certainly shown by the existence of plants and plants that live in the environment. The environment that makes a society a good part of a good health condition as well. A good society in a healthy way has health and complies with the standards of public health and safety [2].

The environment brings tremendous influence on health, a clean environment will bring good health and have well for society and life. Life in the health dimension has a very important impact on people's lives and public health in communicating and health [3]. In the development of geography in the city gives a problem and for society and environment and health. Health must be seen from various sides that bring to the good of society that exist in condition of various condition of society and environment that exist. People in the context of the environment and health are important in the realm of culture and health, health for health in terms of better health in the context of society and society in the existing environment [4]. An important part of all that exists in the environment and existing health is an important part that must be understood with the various things that exist in the environment and welfare that exists. Health and the environment are two interconnected sides and must be viewed clearly in the
context of health and society. A clean environment will produce clean and good health outcomes as well [2]. In an existing perspective the environment provides the cultural aspects that exist within the community.

In an existing environmental society within a society that exists within the political environment existing in the nation's politics. Communities in the environment and society exist in the conditions and contexts of society and existing and environmental health [5]. Environment in the health dimension provides the importance of a healthy solution and in accordance with expected environmental conditions and produce a healthy and healthy environment. Healthy in the environment gives meaning to a meaning in existing society. Healthy in the dimension of the environment gives meaning that brings to many things in society that have the opportunity in the world of health that exist.

2. Methods
The method used is a qualitative method by making observations and interviews with direct observation in Dago area which has a cool area and in accordance with the condition of the area Dago which has a cool condition and in accordance with the Dago area. Of course, also done with the interview with the community about the environment in the environment Dago and of course with the surrounding environment.

Taylor [5], taking into account the importance of geographical conditions provides guidance so that people can exercise and safeguard rather than geographical conditions and that it should be possible with education. Thompson [6], provides an overview of the importance of data relating to anthropology in developing an and searching for empirical data. The environment must be kept sustainable and bring goodness to mankind's life [1]. Levine [4], in geography the most important thing to note is the religious dimension that exists in the existing environment.

3. Results and discussion
A beautiful environment provides an opportunity and health that gives strength in good environmental health in accordance with the desire to be achieved in accordance with the wishes that want to bring health and well-being in a healthy environment is a meaningful unity [7].

Health provides the meaning of a circle environment that is good according to the conditions and in accordance with the expectations to be achieved and addressed. A condition that absolutely must be done is a healthy and prosperous environment in accordance with the norms of existing rules. Health provides a good meaning and in accordance with the purpose of healthy living. Healthy living provides an important meaning in accordance with a society in the ideals of human beings who perfect.

Nature becomes a teacher in our lives and provides an endeavor to understanding the world in the living community and the existing health of the environment. Bringing the environment into an important part of the meaning of health that exists within the existing culture within society and the environment and become a must to become a force within an environment that exist in Dago area. Dago area is an area that has so great benefits since the former is a region that does have a clean environment and has aspects in various aspects of health that provides strength in the opportunities and health [8].

Environmental aspects provide a variety of issues that cause health problems, health problems that occur due to problems in opportunities and health in the community environment. Community environment that has various aspects in the opportunity and health. There are things that must be done and prioritized in the front and clean environment that is related to safety in health. A clean environment will provide a potential that brings the welfare and health of the community. Health and the environment have a very important impact on society in an existing environmental strength.

Environment brings good and bad things to society, both in this case is bring health to the community. Whereas in a bad case is when it is bad to health and the environment [4]. Of course, it relates to the behavior and behavior of society to the environment when a clean environment brings good health. Bad environments lead to poor safety and health. Health that brings the health impact of existing society, life in the realm of the environment gives to the community.
Health and the environment are two dimensions that are related to each other because it gives significant impact to each other that supports and brings to the expected results one to another [9]. That is, in the context of geography would affect the health and the environment. The significance of this needs to be seen from the whole dimension in order to understand and interpret an environmental context that leads to health in the community. The health that makes a condition of significance in a social and geographic dimension means that a geographic dimension will be important when the social dimension plays within that sphere. The domain of a unity within a nation and the contour context of the geography that exists within an existing society. Contours to be considered by all who want a health condition that leads to the condition of society with a strong social dimension in social and geographical nuances. This means that in this paper to be submitted that geographical conditions play a significant role in bringing a good condition in the existing public health [10].

4. Conclusion
The conclusion that is within society in the environment and society, meaning health will bring to safety and health in society. Health in the environment and health provides the strength and health of dago community. Society in opportunity and public health. Society in the existing ritual brings to the good in society that protects health. Health in the nuances of the environment provides health impacts to the community in a healthy environment. A clean environment in the opportunities and health that exist in society so in society. Health in the community and community environment. The environment has an impact on existing safety and health. The conclusions obtained are an important part of health that leads to a clean environment in accordance with the existing environment and in accordance with the wishes of the community. Health and the environment in the existing area of the region and provide expected results in accordance with the wishes that exist. The community has the power to bring various activities and desires in terms of health and the environment.
