Palaeologan Veria: A Peripheral Center under the Perspective of Its Monuments. The Case of the Marble Decoration from the Old Metropolitan Cathedral as a Possible Donation by Christian Members of the Seljuk Dynasty

The restoration work carried out by the Ephorate of Antiquities of Imathia at the Old Metropolitan Cathedral in Veria has restored for the city its most important Byzantine church, a monumental palimpsest that recorded centuries of the history of the city and its people.

The Middle Byzantine three-aisled basilica with transept was renovated by the Despots of Epirus and again during the era of the Palaiologan Dynasty. It was converted into a mosque around the turn of the 17th century and remained Veria's great imperial mosque until the liberation of the city in 1912. The first conservation and exploratory excavation work began in the 1960s and continued, albeit limited in scope and duration, until systematic restoration work on the monument eventually began.

This essay presents sculptures that came to light during the first phase of the investigations and the main phase of the restoration of the Old Metropolis in 2011–2015. They form a group with common stylistic features and are associated with a phase of renewal of the church's liturgical furnishings in the first two decades of the 14th century, when the ecclesiastical seat of Veria was raised from an Archdiocese to a Metropolitan seat.

The group of sculptures in question was first discovered in the period 1978–1980, when Professor Theocharis Pazaras, curator of antiquities of the newly founded Ephorate of Byzantine Antiquities, noticed characteristic groups of cornices, columns and slabs while arranging the collection of sculptures stored in the twin Ottoman bath. In the following years, the group was enriched thanks to the research work conducted by Professor Efthy-
mios Tsigaridas on the later flooring of the Old Metropolis [45, pp. 161–162]. The work of the 1960–1980s added new finds to a distinctive group of Palaiologan sculptures of the 13th–14th centuries, which common characteristic is an oriental decoration of intertwined geometric and floral decorative motifs: circles, palms, pseudo-kufic characters, arabesques, with griffins, eagles, peacocks, and crosses. In his studies, Pazaras linked the finds with a Late-Byzantine pulpit in the double-staircase type with canopy [45, p. 162; 47]. The comparative study of these sculptures combined with information from the historical sources places the sculptures within a general tendency to renew the Islamic influences in Byzantine art during the Palaiologan period, but also permits the formulation of a working hypothesis possibly connecting them with the reported movements of members of the Seljuk dynastic house of the Sultans of Rum in Veria and its environs.

During the restoration work carried out on the monument between 2011 and 2015, the group of sculptures with oriental decoration was further enriched with finds that added new data. Removal of the floors in the north aisle revealed a marble panel, adjacent sections of a rectangular slab, and a triangular panel. These relief sculptures are adorned with oriental motifs whose closest parallels are found in the works of architectural sculpture and miniature arts of the Seljuk Islamic Sultanate of Rum in Anatolia [2]. The intact panel (Fig. 1), measuring 1,01 by 0,855 by 0,07 m, retains relief decoration only on its upper half. Its central subject is a pair of circular motifs inscribed within quadrilateral frames; interlocking triangles within the circles form six-pointed stars, lance-like patterns and hexagonal rosettes. The thickness of the panel is 7 cm, which is similar to that of the Middle-Byzantine panels of the church and to the width of the groove on the stylobate of the sanctuary screen for the panels of the iconostasis (Figs. 2–4). This similarity may indicate that it was installed as a completion or repair in the Palaiologan period, while the other dimensions are associated with heights of 0.90 to 1 m and a width of 0.85 to 0.87 m.

Similar interlocking and emerging circular motifs within square frames, which in turn enclose knots, adorn the adjacent parts of another panel to which, in accordance with the surviving finds, belong fragments with similar decoration executed in a drilling technique (Fig. 5).

The work also brought to light part of a triangular marble slab formed of three attached parts and several smaller ones, similar to a triangular slab published by Pazaras [45, p. 161, fig. 31; 47, pl. 137]. The champlevé decoration of this panel forms a continuous naturalistic scroll of tendrils, which include stems and leaves, and is stylistically similar to a rectangular slab discovered during the first phase of work on the monument (Fig. 6).

The following sculptures come from the initial phase of investigation:

1) Cornices and epistyles with a concave façade adorned by a continuous grid of interlocking diagonal bands (like basket-weave) [45, pp. 161, fig. 28a-b, 29a-c, 34d; 47, p. 252, pls. 136–147] form three groups of fragments that might belong to tapering...

Fig. 4. Veria, Old Metropolitan Cathedral. Sanctuary screen (reconstruction). Hellenic Ministry of Culture and Sports, Photographic Archive of the Ephorate of Antiquities of Imathia
epistyles or claddings, decreasing in size from 0.43 to 0.35 m, 0.40 to 0.30 m and 0.34–0.33 to 0.25–0.26 m (Fig. 7). Similar marble fragments/reliefs adorned the cornices of the until recently preserved Ottoman minbar of Aghia Sophia in Ochrid [33, p. 146, fig. 156; 32, fig. 38] and some lintels from the katholikon of the Chilandari Monastery [33, p. 146, fig. 154–155], while the decorative pattern of a triple line of thin strands is also found in the decoration crowning a panel in Aghia Sophia in Ochrid [18, Pl. CXXXIXb], in the frame of a fragmentary panel from the church of the Dormition of the Virgin in Makrinitsa, Pelion [18, Pl. CXXXIXd], and in the late 13th/early 14th-century ciborium from the southern imperial ecclesiastical foundation of the Lips Monastery in Constantinople dedicated to John the Baptist [27, fig. 63]. The later, 14th-century, examples of this strand motif are traced in the relief cornices on Serbian church facades in the Morava Valley, such as the church of the Dormition of the Virgin in the Ljubostina Monastery [9, p. 681, fig. 793].

2) Chamfered cornices (Fig. 8) share a common decorative theme of continuous interlocking vegetal bands, which include floral arabesques made from interlocking stems [45, p. 161, fig. 26–27; 47, pls. 1361-2]. In one of the cornices a medallion with an encircled monogram read as Demetrios is preserved [45, fig. 27; 47, pls. 1362γ, 14723]. The decorative themes are executed in the champlevé technique and low relief. It is noteworthy that both techniques, separated by a plain section, are preserved in one of the cornices, a detail that supports the hypothesis that these fragments are all part of a single set. In this group of reliefs, several of which are attached, most of their decoration is executed in champlevé, with the decorative motif highlighted by a background
infill of black inlay⁴. Where low relief is used, the vegetal band is rendered with double curved outlines and the recessed field remains plain. Reliefs of similar decoration can be seen at the Church of Aghia Sophia in Ochrid [45, pp. 161, 166, fig. 5a-c], the katholikon of the Chilandari Monastery [38, pp. 108, 110, fig. 18, 20], the Church of Episkopi, Ano Volos [1, fig. 5, p. 536], the Church of Aghios Ioannis Prodromos

⁴ The use of the technique results in a painterly rendering. For an iconographical example see R. S. Nelson [37, fig. 7].
Fig. 8. Veria, Old Metropolitan Cathedral. Cornices (nos 620/Γ59, 622/Γ52, 623/Γ53, 624/Γ54, 1369/Γ252, 1546/Γ506). Hellenic Ministry of Culture and Sports, Photographic Archive of the Ephorate of Antiquities of Imathia

Fig. 9. Veria, Old Metropolitan Cathedral. Two pairs of cauldron-shaped capitals (nos 551/Γ2, 552/Γ3, 553/Γ4). Hellenic Ministry of Culture and Sports, Photographic Archive of the Ephorate of Antiquities of Imathia
in Portaria, Pelion [30, p. 38, fig. 41–42], the katholikon of the monastery of Aghios Lavrentios in Pelion [16, p. 390, fig. 4–5; 25, pp. 242–244, pl. 97α–β], and the Byzantine and Christian Museum in Athens [11, pp. 278, 280, 281, fig. 1–5]. In his proposed reconstruction of the pulpit, Pazaras related and graphically restored these sculptures as a chamfered cornice placed below the four-sided roof of the pulpit’s canopy, measuring approximately 2,50×1,40 m [47, p. 253, pls. 142, 145].

3) Two pairs of cauldron-shaped capitals (Fig. 9) [45, fig. 30 a–d; 47, p. 251, pl. 137 a–d]: the body of the first pair is covered with low-relief decoration consisting of narrow interlaced bands that form lozenge-shaped panels incorporating diminutive, cross-hatched, blossoming vine scrolls or inverted larger buds in heart-shaped frames. The triangular forms of the upper part of the body, beneath the entablature, are decorated with flowers bearing lance-like petals. The body of the second pair of capitals is covered with low-relief decoration consisting of a narrow, interlaced band forming elliptical pointed panels that frame inverted and fragmented blossoms. Cross-hatched buds decorate the space between the panels. The pairs of capitals present many stylistic similarities to the ones from the pulpit of Aghia Sophia in Ochrid, dated to 1317 [18, pp. 149–150, Pl. CXXXVIIIa–c].

4) A triangular slab bearing a double foliate cross with interlaced vine scrolls [45, p. 161, fig. 31; 47, p. 251, pl. 137] presents a system of organising and executing the theme of foliate crosses similar to those on the capitals of the window mullions in the sanctuary of the katholikon of the Chilandari Monastery [38, pp. 86, 118, 122, fig. 30, 34, 35, 107].

5) Two quadrilateral slabs preserve intersecting circles, palmettes and half palmettes surrounded on three sides by a guilloche (Fig. 10). In the representation of the pulpit proposed by Pazaras, they are placed on the narrow sides of the canopy [45, p. 162, fig. 33; 47, p. 251, pls. 138 a–d, 124]. Similar rosettes of arabesque influence are preserved on the canopy sides of the Ottoman pulpit of Aghia Sophia in Ochrid [18, pp. 149–150, Pl. CXXXVIa; 32, fig. 38], on a marble slab from the katholikon of the monastery of Aghios Lavrentios in Pelion [4, pp. 460–461, fig. 11], on the panels of the bishopric of Ano Volos [2, fig. 1–2, 4; 3, p. 93, fig. 13]5, while the chronologically later ones decorated the monumental facades of the Morava valley churches in the 14th–15th centuries6 [7, p. 334, fig. 1].

---

5 We also note a similar rosette from an immured panel in a façade of St. Sophia in Trebizond (drawing in P. Androudis [2, p. 164, fig. 6b].

6 Besides Kalenić, the following monuments are mentioned: St. George at Pološko, St. Archangel Michael at Lesnovo, Marko’s monastery near Skopje, Holy Archangels in Kučevište, St. Nicholas in Ljuboten, St. Nicholas Šiševski on Treska, Matejić monastery, and St. Andrew monastery at Matka.
Fig. 10. Veria, Old Metropolitan Cathedral. Two quadrilateral slabs (no 627/Γ101 top, no 627/Γ101 middle). Hellenic Ministry of Culture and Sports, Photographic Archive of the Ephorate of Antiquities of Imathia

Fig. 11. Veria, Old Metropolitan Cathedral. Pair of colonnettes (no 597/Γ41). Hellenic Ministry of Culture and Sports, Photographic Archive of the Ephorate of Antiquities of Imathia
6) Two colonnettes (Fig. 11) [45, p. 162, fig. 34a-b; 47, p. 251, pl. 1389α-β], each of which has two adjoining faces bearing relief decoration, are adorned with intersecting circles and foliate ornaments of interlaced leaf crosses identical to those on the colonnettes from the Ochrid pulpit [45, p. 165, fig. 4a-b].

7) A rectangular slab with part of its upper right corner missing retains, on its left side, a pointed arch framing quadrilateral compartments [47, p. 252, pl. 13910]. The lower half of the slab is decorated with a composite arabesque of a cruciform central rosette inscribed within a circle, which in turn is framed by a square. The corners of the square are occupied by five-petalled palmettes (Fig. 12).

This particular style of sculpture was first pointed out by Gabriel Millet [33, p. 146, fig. 154–156], who observed the similarities between the Ottoman pulpit (minbar) in Aghia Sophia in Ochrid adapted from parts of a Byzantine pulpit and the canopy/ciborium known as the throne of Archbishop Gregorios of Ochrid, the epistyle of the templon barrier in the Church of Porta Panaghia [24, p. 74, fig. 141; 40, pp. 27–29], the lintels in the katholikon of the Chilandari Monastery, the façade and sides of the sarcophagus of Anna Maliassene and a pediment slab with foliate ornamentation, all from the church of Episkopi, Ano Volos. Millet also connected the tombstone of Anna Maliassene’s husband, Nicholaos, with the sculptures from Episkopi, Ano Volos [33, p. 146]. George Sotiriou was the next scholar to discuss the stylistic connection between these works of sculpture [57, pp. 78–81], and André Grabar added to this group the sarcophagus of George Kapandritis from Thessaloniki7 [18, p. 151, Pl. CXXXIIIa-b]. Later on, the group was further enriched, with the addition of relief sculptures from the katholikon of the Chilandari Monastery, namely the lintels over the western entrance to the inner narthex and the doorway between the inner narthex and the nave, the capitals of the window mullions in the sanctuary, and the marble slabs beneath the windows of the northern choir8 [38, p. 108, fig. 20, 34–35, 107, 128], epistyles from the Byzantine and Christian Museum [11, pp. 278, 280, 281, fig. 1–5], and similarly decorated sculptures from the monastery of Panagia and Aghios Dimitrios near Tsagezi [55, p. 368, fig. 21], the churches of Taxiarchis in Locris [39, pp. 367–368, fig. 20; 59], Aghios Lavrentios in Pelion [16, p. 390, fig. 4–5; 26, pp. 242–244.

---

7. See also the study by A. Xyngopoulos [66].

8. Also P. Mylonas [35].
The similarities between the marble reliefs from the Old Cathedral and parts of the Ottoman minbar of Aghia Sophia in Ochrid, attributed by Petrov to a reconstructed Late-Byzantine pulpit in the double staircase with canopy type [48], led Pazaras to correlate these sculptures with a marble pulpit and reconstruct it in a way similar to that of Aghia Sophia in Ochrid. Although Pazaras concedes that there are several pieces missing from this reconstruction, he considers it realistic in general. His scientific contribution lies in the fact that he has identified a previously unknown piece of Late-Byzantine liturgical furniture from the Old Cathedral of Veria by taking into consideration the reconstruction of a Late-Byzantine ambo in Ochrid, corner elements in the surviving cornices and epistyles from the Old Metropolis, and Adolph Struck’s information about the existence of an Ottoman minbar in the Old Metropolis mosque [58, p. 32]. Pazaras dated the proposed reconstructed pulpit of Veria to the period around 1300, along with the doors and windows from the katholikon of the Chilandari Monastery and the pulpit of Aghia Sophia in Ochrid, and more specifically to the period 1300–1317, as part of a further renovation of the Old Cathedral. He also associated the medallion framing the monogram Demetrios inscribed on one of the cornices with a bishop of Veria, unknown from written sources, from the period 1285–1326 when there was a gap in the Episcopal catalogue [47, pp. 253–254].

Recent work on the floors of the north aisle of the Old Metropolis also brought to light a marble slab, 10 cm thick, which retains part of a circle marked by a groove and traces of mortises/sockets on its upper surface, which could have come from the platform of a pulpit. A sculpture that resembles part of an unfluted column was discovered during the work carried out in the south part of the narthex. It partially preserves a groove for support on one end, and could therefore be combined with the above pulpit platform, forming part of its infrastructure. To these elements, one may possibly add a fragmentary Middle-Byzantine slab from the earlier excavations. This slab, 9–10 cm thick, might belong to a staircase parapet, and with the two previous fragments compose a pulpit exemplifying the ellipsoid, double-staircase plan typical of the Middle Byzantine phases of the monument (Fig. 13).

After the restoration of the marble sculptures with oriental decoration, and especially after the work on the chamfered cornice with continuous heart-shaped motifs, different elements have been discovered relating to the proposed plan of reconstructing these parts as a cornice from the canopy of a pulpit/ambo. In particular, certain basic variations are found, as four segments with champlevé decoration form the integral sides of a structure and not the proposed part of one of the canopy’s long sides (Ill. 33, green indication). Also, three pieces that have been placed: one on one of the long sides of the quadrilateral cornice, and two others that had been placed on one of the narrow sides of the cornice, are joined together, breaking the proposed original scheme (Ill. 33, orange indication). Finally, parts of the proposed integral narrow side are not joined together (Ill. 34). While measuring the dimensions of the architrave, which according to the proposed reconstruction is supported by the four capitals,
it was found that the capitals are 7 cm wider than the supposed architrave. Excavation data have also provided information on the possible location of the Christian pulpit, in the middle of the central aisle, and the excavation of two Ottoman minbars have identified their position on the opposite axis, in contact with the south wall of the building in the Ottoman period. If these elements were correlated to the parts of the pulpit platform and infrastructure that can be ascribed to a type of ellipsoid plan, it is quite possible that the pulpit of the monument belonged to the type with two staircases but without the proposed canopy plan (Ill. 35, yellow indication).

The above elements, combined with the dimensions of the panel with the double oriental motif, which approach those of the Middle-Byzantine panels of the monument, and the proportionally reduced thickness of the 14th-century triangular slabs, just 0.04 m for members usually 0.10 m thick, are indicative of a renewal of the sculptural decoration of the church at the time of the raising of the church to a Metropolitan seat (Ill. 35, purple indication). This renewal could comprise partial completions and modifications of the Middle Byzantine elements in the pulpit, as in the case of the triangular slabs, the templon barriers, as indicated by the panel with oriental decoration, and other liturgical installations and settings as well, for which elements are no longer preserved due to the constant transformations and repairs of the building.

To the Palaiologan sculptures with oriental decoration from the Old Cathedral may also be added fragments from funerary monuments with similar decoration that have been discovered in Veria, mainly from church floors. These are a tombstone with monograms once embedded
in the floor of the church of Panaghia Pantanassa or Paleophoritissa and a marble slab, probably part of a larger piece, which preserves a circular arabesque ornament (Fig. 14), very similar to that on the slab of Maliassenos [1, fig. 1, p. 535].

Comparable Islamic ornaments are also found in a series of Palaiologan manuscripts. Here, the arabesque motifs are equally influenced by Komnenian tradition and the transfer of Anatolian Seljuk motifs through artistic creation from Iconium to Constantinople. The constant communication between the worlds of Byzantium and Anatolia, detectable in art, reflects the political and social realities that shaped the Komnenian and Palaiologan eras.

One may, consequently, wonder whether, in the context of these exchanges and communications between the Byzantines and the Seljuks, the Palaiologan sculptures of the old Cathedral might not in fact be associated with the presence, documented by written sources, of the family of Sultan ʿIzz ad-Dīn Kaykaus II of Iconium in Veria?

According to written sources, members of the family of the sultan ʿIzz ad-Dīn Kaykaus II, his mother, attested as Greek by both Christian and Muslim writers [52, pp. 106, 109], possibly his wife, and various noblemen remained settled in the Byzantine regions of Veria, the Giannitsa marshlands and Zehrne, in Serres [65; 25; 67; 51, pp. 180–190; 52, pp. 99–131, 157–215]. The districts in the region of Veria of Komanitzes, Tourkochori-Patrida, and the areas of Meliki, Rihanna, and Nese, which were traditionally known in Greek by the name of Roumlouki, are mentioned in the documents as concessions to the noble incomers [60], that is, the members of the dynasty’s family and supreme officials of the Seljuk ruling house, most of them Greek-speaking Christians who considered themselves to be Rumi. Those named were Prodoulia, Melik Constantine, Theodora Soultanina (Veria, PLP, no. 26335), Xene Soultanina Palaiologina (Nesion, Resaine, PLP, no. 26336), Athanasios Soultanos (Koumavitzić, PLP, no. 26337), Alexios Soultanos Palaiologos (Nesion, PLP, no. 26338), Demetrios Soultanos Palaiologos (Resaine, PLP, no. 26340) and Soultanos Palaiologos (Veria, PLP, no. 26341). The settlement of Rumi

---

10 Two researchers propose different readings for the epigraph: Pazaras reads ΔΙΑΚΟΝΟΥ ΚΑΛΗΜΕΝΤΟΣ (of Clement the deacon) [46, p. 26, no. 13] and Papazotos reads ΔΟΥΚΑΙ ΛΗΖΙΚΟΝ (DUKYKAN Lyzikos) [44, p. 103].

11 See [36], with references to sources documenting the presence of Islamic ornamental art in objects and buildings during the twelfth and thirteenth centuries.

12 See George Pachymerēs [15, vols. I–II, I, 131, 2] and Nikēphoros Grēgoras [62, vols. I–IV, IV, 94, 13–14].

13 See Georges Pachymerēs [15, vols. I–II, II, § 612, 13–16, and § 613, 7; and vol. III, XIII, § 675, 2–14]: ὁ Μεληκ Κωνσταντίνου, τῶν τοῦ σουλτάνου νίὼν ἄτερος [...] βαπτισθεὶς ἐκθύμως προσετετήκει τοῖς Ῥωμαϊκοῖς ἤθεσιν.
sultans in the Veria district probably contributed to the region's later appellation of Roumlouki, that is perhaps, the place of those who came from Anatolia and called themselves Rumi. 

Since we know from the archival researches of E. Gara that the Old Metropolis of Veria and its environs were known in the late 16th and early 17th century as the Melek Monastery [54, p. 542, footnote 25], we think it probable that the architectural sculptures described above were given to the church by that family, who could, in general, have been its patrons and benefactors. The subject matter of the sculptures, although widespread in the Palaiologan era as the result of the interaction of the Christian with the Islamic world, indicates a partiality on the part of the sponsors for this type of decoration.

The above made hypothesis that the Palaiologan sculptures of the Old Cathedral might be associated with the settlement of Christian members of the Seljuk Dynasty in Veria and its environs offers also a realistic possibility for the preference of this particular type of Islamic decoration rather than only perceiving it within the decorative tendencies of the time.

Title. Palaeologan Veria: A Peripheral Center under the Perspective of Its Monuments. The Case of the Marble Decoration from the Old Metropolitan Cathedral as a Possible Donation by Christian Members of the Seljuk Dynasty

Author. Cheimonopoulou, Maria V. — Ph. D., head of the Department of Byzantine and Post-byzantine Antiquities and Museums. Hellenic Ministry of Culture and Sports, Ephorate of Antiquities of Imathia, Riga Fereou 16–18, 591 32 Veria, Greece. cheimaria@yahoo.gr ORCID: 0000-0001-8010-7657

Abstract. By the rising of the Palaiologan dynasty in Constantinople, regional centers on the Greek mainland, such as Veria, lived and prospered under the influence of the Byzantine capital, and at the same time geographically close Thessaloniki. The essay presents sculptures that came to light during the first phase of the investigations and the main phase of restoration of the Old Metropolis in Veria during the years 2011–2015. The sculptures decorated with arabesque motifs form a group with common stylistic features and are associated with a phase of renewal of the church's liturgical furnishings in the first two decades of the 14th century, when the ecclesiastical seat of Veria was raised from an Archdiocese to a Metropolitan seat. The subject matter of the sculptures, although widespread in the Palaiologan era as the result of the interaction of the Christian with the Islamic world, might be associated with the presence, documented by written sources, of the family of Sultan Izz ad-Din Kaykaus II in Veria. The study of the documents, sources and published material and assessment of the evidence relating to members of the Seljuk ruling house of Iconium who settled in Byzantine territories of Imathia, the region of Veria including the village of Komanitzes, and the areas of Meliki, Ressiane, and Nese, reveals three noble families who took over the lands and general administration during the Palaiologan era. Since it is known from the archival researches of E. Gara that the Old Metropolis of Veria and its environs were known in the late 16th and early 17th century as the Melek Monastery, we think it is probable that the architectural sculptures described above were given to the church by that family, who could have been its patrons and benefactors.
