Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

Corona and clergy – The missing link for effective social distancing in Pakistan: Time for some unpopular decisions

Keywords:
COVID-19
Social distancing
Religious congregations
Public perception
Clergy
Health policy

Religious congregations have resulted in an explosive spread of COVID-19 in many countries. At one stage, more than half of the COVID-19 cases in Malaysia had been infected during a congregation of 16,000 believers from 30 countries (Beech, 2020). For weeks, the clergy in Iran refused to accept a ban on gatherings of pilgrims in holy shrines until the virus had crossed the borders of neighboring countries (Ziabari, 2020). Tableeghi Ijtimai (an annual, international Muslim missionary gathering) in Raiwind, Pakistan became a super-spreader of the virus due to the ‘stubbornness of the clergy’, which opposed the closing of the congregation; however, it subsequently agreed to curtail the 6 days event to 3 days. Later, when cases surged in those attending the congregation, Raiwind was sealed off and declared a hotspot. More than half of the cases in Punjab (the most affected province) had emanated from the Raiwind congregation (Table 1) (Government of Pakistan, 2020).

Pakistan’s case is of concern due to its fragile healthcare system, poor hygiene practices, limited access to healthcare, and a steep rise in the number of local cases in a population bigger than Italy and India combined. Evidence supports the substantial impact of social distancing as a viable practice for containing the spread of the virus (Koo et al., 2020). However, the successful implementation of any social practice requires public support. In Pakistan, the practice of social distancing has remained poor due to a lack of support from the clergy, which influences religious congregations as well as the wishful beliefs of the public. Mosques are auspicious in Muslim societies, where congregations held five times a day. The public and clergy perceive closing of mosques as a bad omen or anti-religious bias, and view the Pandemic as a sign of God’s rage that can only be appeased by collective prayers. However, when places of worship can aid the spread of COVID-19, the clergy needs to rethink its religious perspective on congregations and convince the public to keep the faith not the germs.

Pakistan’s clergy remains opposed to restrictions on mosques, and has pressurized the government on grounds of religion. As a result, Pakistan’s lockdown policy involves a ban on public gatherings, but excluding congregations in mosques (Sajid, 2020). This defies the logic of social distancing and will undermine previous efforts to contain local transmission, leading to an indomitable public health risk. The preposterous proposal of the clergy to control and organize the influx of people at each mosque is as vague as the initial idea of voluntary social distancing.

Amid the pandemic, other Muslim countries have taken unconventional, yet exemplary decisions. For instance, across the Middle East, Friday prayers have been cancelled in mosques. For the first time in modern history, Saudi Arabia has closed Mecca, the spiritual center of Muslim world, and cancelled the Umrah pilgrimage. In Kuwait, Adhan (call for prayer) — an element of Islam that has remained unchanged for centuries — has undergone a slight tweak, with the muezzins replacing ‘hayya alas-salah’ (‘come to prayer’) with ‘as-salatu fi buyutikum’ (‘pray in your homes’) (The Economist, 2020).

WHO has warned that ‘the worst is yet ahead [of us]’. Pakistan is now facing the challenge of implementing social distancing in the holy month of Ramadan (April 26), when attendance at mosques increases many-fold for daily prayers and Tarawih (an additional prayer in Ramadan). This will be followed by the month of Hajj (the pilgrimage to Mecca and the largest gathering in the Muslim calendar). During this time of uncertainty, the public needs an unequivocal narrative on social distancing and congregations. This is a critical time for the government, which needs to make some

Table 1
Number of COVID-19 cases in Pakistan, based on data available on April 20, 2020

| Province/Federal District | Confirmed COVID-19 cases |
|---------------------------|--------------------------|
|                           | From Tableeghi Ijtimai Raiwind | Pilgrims from Iran | Others | Total cases | Total deaths | Total recoveries |
| Punjab                    | 1531                      | 701              | 1489  | 3721        | 42           | 702            |
| Sindh                     | 658                       | 280              | 1599  | 2537        | 56           | 625            |
| Khyber Pakhtunkhwa        | –                         | –                | –     | –           | –            | –              |
| Balochistan               | –                         | –                | –     | –           | –            | –              |
| Islamabad                | –                         | –                | –     | 181         | 3            | 20             |
| Gilgit-Baltistan          | 9                         | 22               | 232   | 263         | 3            | 194            |
| Azad Jammu and Kashmir    | –                         | –                | –     | 49          | 0            | 10             |
| Pakistan                  | 2198                      | 1151             | 3738  | 8420        | 176 (2.09%)  | 1970 (23.39%)  |
