## Supplement Material. Table 7

### Results of the pilot study of the SANO trial stratified for study centers

| Study centers       | Ludwigshafen | Würzburg |
|---------------------|--------------|----------|
| Enrolled participants (%) | 10 (56)     | 8 (44)   |
| Female (%)          | 2 (20)       | 3 (38)   |
| Age (mean, SD)      | 65 (13)      | 66 (12)  |
| Common reasons for exclusion (%)¹ |               |          |
| Modified Rankin Scale > 3 | 7 (8)        | 11 (23)  |
| No diagnosis for ischemic stroke | 23 (26)      | 1 (2)    |
| Prior stroke        | 12 (13)      | 0 (0)    |
| Duration informed consent in minutes (mean, SD) | 12 (4)       | 19 (9)   |
| Duration baseline assessment (mean, SD)²   | 100 (8)      | 169 (48)† |

¹ Exclusion criteria as chosen independently by the local study team, only the first criterion that led to exclusion was documented, percentages based on all non-recruitable patients per study center

² for five patients in Würzburg, time assessment for two, three and four modules was missing in three, one and one patient, respectively (1-4% missings per patient)

† one patient had cognitive deficits (MoCA test 21 points) which led to prolonged durations of all assessments
