Keywords: Chalcone, 1,3,4-Oxadiazole, Anti-bacterial, Anti-fungal

ABSTRACT. In this article, we have described to design and synthesized a series of substituted chalcone based 1,3,4-oxadiazole derivatives. Titled compounds (E)-S-(5-phenyl-1,3,4-oxadiazol-2-yl) 2-(4-(3-(5-methyl-3oxo-2(p-tolyl)-2,3-dihydro-1H-pyrazol-4-yl)-3-oxoprop-1-en-1-yl)phenoxy) etanethioate (III1-6) were synthesized using of derivatives of S-(5-phenyl-1,3,4 oxadiazole-2-yl)2-chloroethaethioate (I1-6) were reacted with (E)-4-(3-(4-hydroxyphenyl)acryloyl)-5-methyl-2(p-tolyl)-1H-pyrazol-3(2H)-one (II) in presence of K2CO3 in DMF as a solvent. The synthesized compounds were evaluated for their antimicrobial activity. The newly synthesized compounds were characterized by analytical and spectral (IR, 1H NMR, and LC-MS) Methods.

1. INTRODUCTION

The versatility of chalcone and its wide range of applicability in medicinal chemistry have attracted scientists all over the globe to concentrate their research around it. They consist of open-chain flavonoids in which the two aromatic rings are joined by a three carbon chain [1]. Chalcones are natural biocides [2] and well known as intermediates for synthesizing of various heterocycles which have impressive array of biological activities; antibacterial [3], antiviral [4], anti-inflammatory [5], antiulcerative [6], antimalarial [7], anticancer [8]. In addition, benzofuran derivatives are nowadays an important class of organic compounds that occur in a great number of natural products [9].

The small nitrogen and oxygen containing molecules have been under investigation since long because of their important medicinal properties. 1,3,4-oxadiazole is commonly utilized pharmacophore has been subjected to extensive study in the recent years due to their metabolic profile and ability to engage in hydrogen bonding with receptor site. 1,3,4-Oxadiazoles are an important class of heterocyclic compounds with a wide range of biological activities such as antiviral [10], antimicrobial [11], antineoplastic [12], fungicidal [13], anticancer [14,15], inhibition of tyrosinase [16]. They are also useful intermediates in organic synthesis [17] and widely employed as electron transporting and hole-blocking materials.

In the present communication, we report here a series of hybrid heterocyclic scaffolds by clubbing chalcone with 1,3,4-oxadiazole [18]. In this present study. The structures of the various synthesized compounds were assigned on the basis of infrared (IR), proton nuclear magnetic resonance spectroscopy (1H-NMR) spectral data, and elemental analysis.
Step-1 Synthesis of S-(-5-phenyl-1,3,4 oxadiazole-2-yl)2-chloroethanethioate (I_1-6)

Step-2 Synthesis of (E)-4-(3-(4-hydroxyphenyl)acryloyl)-5-methyl-2(p-tolyl)-1H-pyrazol-3(2H)-one (II)
Step-3 Synthesis of titled compounds of \( \text{III}_{1-6} \)

Where \( R = \)

Scheme-1 Synthesis of compounds of \( \text{III}_{1-6} \)

2. RESULT AND DISCUSSION
The formulation of the titled compound \( \text{III}_{1-6} \) was archived in three steps. Initially synthesis of different derivatives of S-(5-phenyl-1,3,4 oxadiazole-2-yl)2-chloroethaethioate (\( \text{I}_{1-6} \)) was undertaken by reacting different 1,3,4-oxadiazole-2-thiol in presence of Chloro acetyl chloride (CAC) using DMF as solvent. Simultaneously of Synthesis of (E)-4-(3-(4-hydroxyphenyl) acryloyl)-5-methyl-2(\( p \)-tolyl)-1H-pyrazol-3(2H)-one (\( \text{II} \)) were prepared by reacting 1H pyrazole containing acetaphenone with \( p \)-hydroxy benzaldehyde where NaOH was used as a base catalyst. The obtained intermediates (\( \text{I}_{1-6} \)) and of (E)-4-(3-(4-hydroxyphenyl)acryloyl)-5-methyl-2(\( p \)-tolyl)-1H-pyrazol-3(2H)-one (\( \text{II} \)) were reacted in presence of \( \text{K}_2\text{CO}_3 \) using DMF as a suitable solvent, Which resulted in the formulation of titled compounds (\( \text{III}_{1-6} \)) in good yield. The elemental analysis of synthesis compounds are indicated in Table-1

3. CHARACTERIZATION
IR spectra
IR spectra of the compound (\( \text{III}_1 \)) Synthesis of (E)-S-(5-phenyl-1,3,4oxadiazole-2-yl)2-(4-(3-(4-(5-methyl-3-oxo-2-(p-tolyl)yl)-2,3dihydro-1H-pyrazol-4yl)-3-oxoprop-1-en-1yl)phenoxy)ethanethioate (\( \text{III}_1 \)) have given a sharp absorption peak at 2983 cm\(^{-1}\) the steching vibration for the aromatic -C-H group. A weak absorption stretching vibration band observed at 2756 cm\(^{-1}\) confirmed the presence of methylene group in the final motifs. The carbonyl functional group present in vicinity to the chalcone (-CH=CH-) has shown a sharp and intense absorption peak at 1663 cm\(^{-1}\)
Another stretching vibration at 1593 cm⁻¹. Confirmation –CH=CH- (chalcone formation) near the carbonyl group. The present of (–C=C-) in the aromatic ring was proved by the presence of an absorption peak at 1537 cm⁻¹. The formation of oxadiazole nucleus was confirmed by the presence of two absorption band at 1035 and 1243 cm⁻¹ indicating (–C-O-C-) linkage in the structure. Thus, IR spectral data support the formation of the desire motifs (III₁₋₆)

H¹ NMR
We have consider compound (III₁) and try to evaluated the proton NMR spectra data two broad but singlet peaks examined at δ= 2.12 and δ= 2.20 indicated the presence of methyl group in final structure. A peak appearing particularly at δ= 4.69 confirmed the proton of methylene group in the final structure. The presence of the protons intact with the two carbon atoms each of the chalcone group was confirmed by the presence of two doublets at δ=7.15 and δ= 7.88, respectively. The proton belonging to aromatic rings of the final molecule were found to correspond between the δ values 7.08-8.93.

4. MATERIAL AND METHOD

Equipment’s, Material and Physical measurements
Melting points were determined in open capillary tubes and were uncorrected. The IR spectra were recorded by a Perkin-Elmer 237 spectrophotometer and 1H NMR was recorded in DMSO with TMS as internal standard on Bruker. AM 400 Mass spectra were recorded on M S route JMS 600-H. The completion reaction was monitored on TLC plates purchased from Merck (TLC silica gel 60 F₂₅₄) and all appropriate solvents were used as mobile phase. All the synthesized compounds were purified by recrystallization method. All the chemicals and solvents were A.R Grade and were used without further purification.

Step-1 General procedure For S-(-5-phenyl-1,3,4 oxadiazole-2-yl)2-chloroethaethioate (I₁₋₆)
Take (0.01mol) 1,3,4-oxadiazole-2-thiol in 10 ml DMF. Dissolve it then add (0.3 to 0.5g) K₂CO₃ & stir it for 15 min. Then add 0.01mol CAC drop wise at 0- 5°C and stir the mix for 2hr. at room temp. The formation of titled intermediate was confirmed by observing the TLC using ethyl-acetate: hexane as a mobile phase. After completion of reaction pour the mix in cold water & collect the product.

Step-2 Preparation for (E)-4-(3-(4-hydroxyphenyl) acryloyl)-5-methyl-2(p-tolyl)-1H-pyrazol3 (2H)-one (II)
A mixture of aromatic aldehyde (0.01mol) and 4-acetyl-3-methyl-1-(tolyl)-Pyrazole-5(4H)-one (0.01mol) in 95% ethanol (20ml) were mixed in round bottom flask and 10ml of 60% of aq. Sodium hydroxide solution added drop wise. Resulting mix was stirred for at 5-10°C, poured into crushed ice and acidified with dilute HCl. The formation of titled intermediate was confirmed by observing the TLC using ethyl-acetate: hexane as a mobile phase.

Step-3 Preparation for titled compounds
(0.01mol)(E)-4-(3-(4-hydroxyphenyl)acryloyl)-5-methyl-2(p-tolyl)-1H-pyrazol-3(2H)-one-(II)
dissolve in DMF. To this solution different derivative were added K₂CO₃ (0.02mol) was added to the above mix Then it was allowed to stir for 4hr at room temp. The formation of titled intermediate was confirmed by observing the TLC using ethyl-acetate: hexane as a mobile phase. The completion of reaction was monitored using TLC plate.

(E)-S-(5-pyridin-1,3,4oxadiazole-4-yl)2-(4-(3-(4-(5-methyl-3-oxo-2-(p-tolyl)yl)-2,3dihydro-1H-pyrazol-4yl)-3-oxoprop-1-en-1yl)phenoxy)ethan-ethioate (III₁)

5. ANTIMICROBIAL ACTIVITY
A broad panel of microbes was used for testing the antibacterial and antifungal properties of the molecules synthesized. The samples were tested by standard protocols like micro-dilution method. Anti-bacterial tests were carried against gram positive and gram negative bacteria. The anti-fungal tests were carried against two fungal strains C.alibicans and A.Niger.

SAR Study
It was observed that the use of ele.withdrawing and ele. Donating group to confer different electronic environments on the molecules showed a great impact on biological activity. Compound III3 and III6 showed good activity.

| Compounds | E-Coli | B-subtilis | C.alibicans | A. Niger |
|-----------|--------|------------|-------------|---------|
| III1      | 31.2   | 34.3       | 125         | 62.5    |
| III2      | 31.4   | 34.2       | 62.5        | 62.5    |
| III3      | 58.5   | 62.5       | 250         | 250     |
| III4      | 36.3   | 37.1       | 125         | 125     |
| III5      | 31.2   | 31.2       | 250         | 125     |
| III6      | 62.0   | 61.0       | 250         | 250     |

6. CONCLUSION
We have synthesized a verity of chalcone bearing 1,3,4-oxadiazole derivatives. In general, compounds with electron withdrawing group showed good anti-bacterial and anti-fungal activity. The results promoted the titled compound chalcone containing oxadiazole as an interesting lead for further synthetic and biological evolution. These titled compounds were confirmed by spectral data.
