Supplemental Digital Content 7. Effect of MAVS Knock-Down in RAW Cells on TOM20 and NIX/BNIP3L levels under normoxia conditions Using Western Immunoblots.

RAW cells were transfected with Control or MAVS siRNA, incubated under Normoxia conditions, and subjected to western immunoblot of TOM20, NIX/BNIP3L, MAVS and GAPDH. No effect on TOM20 and NIX/BNIP3L levels after treatment with MAVS siRNA can be noted. Note reduction in MAVS levels after treatment with MAVS siRNA.
