Introduction

To this day, the largest share of investments in Central Asia – 59 percent, was focused on homashyo networks. It accounts for about 9 percent of investments in sectors such as telecommunications, trade, financial services. This indicator is much lower than the universal level.

The BCG company has identified three sectors with relatively high investment potential in the MO region: the processing of agricultural products, the petrochemical sector and tourism. The networks were sorted based on the following criteria:

- relatively low level of investment;
- lack of barriers to penetration into networks;
- that they are the priority sectors for the governments of the MO countries.
