Experimental

1. Synthesis

\textit{(E)-1,3-bis(4-hydroxyphenyl)prop-2-en-1-one 2}

BF\textsubscript{3}OEt\textsubscript{2} (10 mmol) was added gradually to a solution of 4-hydroxyacetophenone (20 mmol) and 4-hydroxybenzaldehyde (20 mmol) in dioxane (4 mL), and stirred at room temperature for 2 h. The mixture was added to cold ethyl acetate and the precipitate formed was filtered and washed with water. The resulting solid was purified by column chromatography using hexane/EtOAc 1:1 (v/v), affording a yellow solid. Yield: 46%. M.p.: 200.2-202.4 °C.
