In Figure 3H, the labels of the X-axis were inadvertently inverted at revision, the data remains correct.

A new figure is provided below.

Figure 3. \( \text{LASTR} \) modulates SART3 interactions with U4snRNP and U6snRNP. (A) Subcellular localization of \( \text{LASTR} \). \( \text{LASTR} \) expression was analysed by RT-qPCR in cellular fractions of MCF10A. Data are presented as mean ± s.e.m.; \( P \)-values were determined by two-tailed t-tests, \( n = 3 \). (B) \( \text{LASTR} \) fluorescent in situ hybridization of MCF10A. \( \text{LASTR} \)-specific probes signal a red. Scale bar, 10 μm. (C) Volcano plot showing \( \text{LASTR} \) interactors from triplicate pull-downs of total protein extracts from MCF10A cells. Proteins interacting with biotinylated \( \text{LASTR} \) sense or antisense strands were determined by MS. Putative nuclear interactors of \( \text{LASTR} \) are shown in red. (D) Validation of \( \text{LASTR} \) nuclear interactors. Biotinylated sense or antisense \( \text{LASTR} \) was used for pull-down from MCF10A cells ectopically expressing HA-tagged candidate proteins. The pull-down was followed by immunoblotting using anti-HA antibody. (E) SART3 was immunoprecipitated from MCF10A total protein extracts using anti-SART3 antibody. The presence of SART3 in the immunoprecipitate was detected by immunoblotting, the presence of the indicated non-coding RNAs in the SART3 immunoprecipitate was determined by RT-qPCR analysis. Data are presented as mean ± s.e.m.; \( P \)-values were determined by two-tailed t-test, \( n = 3 \). (F) \( \text{LASTR} \) was pulled down from MCF10A cell lysates using biotinylated Stellaris probes. Stellaris probes against antisense \( \text{LASTR} \) were used as a negative control. SART3 and NONO were detected in the \( \text{LASTR} \) pull-downs by immunoblotting. (G) Volcano plot of SART3 interactors from triplicate pull-downs of total protein extracts from MCF10A cells treated with Scramble GapmeR or \( \text{LASTR} \) GapmeR1. U4-associated proteins are shown in red; U6-associated proteins are shown in blue. (H) Presence of U4snRNA and U6snRNA in SART3 immunoprecipitates as detected by RT-qPCR. SART3 immunoprecipitated from total protein extracts of MCF10A cells treated with Scramble GapmeR or \( \text{LASTR} \) GapmeR1 using anti-SART3 antibody. Data are presented as mean ± s.e.m.; \( P \)-values were determined by two-tailed t-tests, \( n = 3 \).
