Characterization of six Shiga toxin-producing *Escherichia coli* (STEC) strains carrying Stx2-phages from Colombia

Brayan Stiven Arango-Gil*1, Sebastián Peña-Buitrago1, Jhon Carlos Castaño-Osorio1, Claudia Viviana Granobles-Velandia1

**Table 1.** Dilutions and absorbances of the ELISA (Ridascreen® Verotoxin R-Biopharm). Used to calculate the Shiga toxin titers of the STEC strains evaluated.

| Strains  | OD650 With MMCa | OD650 Without MMCb | Titer With MMCa | Titer Without MMCb |
|----------|-----------------|--------------------|-----------------|--------------------|
| 102      | 0.63            | 0.76               | 63.9            | 7.68               |
| 10610    | 3.58            | 0.22               | 7176.6          | 444.6              |
| 5052     | 1.61            | 0.37               | 3236            | 37                 |
| 600      | 0.7             | 0.27               | 2800            | 550.6              |
| 615      | 3.38            | 0.78               | 3.39            | 0.79               |
| N108     | 2.63            | 0.29               | 1316.6          | 29.5               |
| EDL933   | 2.01            | 2.098              | 8086.6          | 209.8              |

*a* Supernatant culture with Mitomycin C (0.5 µg/ml)

*b* Supernatant culture without Mitomycin C

*a* Supernatant without dilution
