8th Workshop on Computational Approaches to Subjectivity, Sentiment and Social Media Analysis (WASSA 2017)

Copenhagen, Denmark
8 September 2017

ISBN: 978-1-5108-4755-2
## Table of Contents

**Detecting Sarcasm Using Different Forms Of Incongruity**
Aditya Joshi ................................................................. 1

**Assessing State-of-the-Art Sentiment Models on State-of-the-Art Sentiment Datasets**
Jeremy Barnes, Roman Klinger and Sabine Schulte im Walde ................................ 2

**Annotation, Modelling and Analysis of Fine-Grained Emotions on a Stance and Sentiment Detection Corpus**
Hendrik Schuff, Jeremy Barnes, Julian Mohme, Sebastian Padó and Roman Klinger .......... 13

**Ranking Right-Wing Extremist Social Media Profiles by Similarity to Democratic and Extremist Groups**
Matthias Hartung, Roman Klinger, Franziska Schmidtke and Lars Vogel .................. 24

**WASSA-2017 Shared Task on Emotion Intensity**
Saif Mohammad and Felipe Bravo-Marquez ........................................... 34

**IMS at EmoInt-2017: Emotion Intensity Prediction with Affective Norms, Automatically Extended Resources and Deep Learning**
Maximilian Köper, Evgeny Kim and Roman Klinger ........................................ 50

**Prayas at EmoInt 2017: An Ensemble of Deep Neural Architectures for Emotion Intensity Prediction in Tweets**
Prayas Jain, Pranav Goel, Devang Kulshreshtha and Kaushal Kumar Shukla .................. 58

**Latest News in Computational Argumentation: Surfing on the Deep Learning Wave, Scuba Diving in the Abyss of Fundamental Questions**
Iryna Gurevych ................................................................... 66

**Towards Syntactic Iberian Polarity Classification**
David Vilares, Marcos Garcia, Miguel A. Alonso and Carlos Gómez-Rodríguez ............ 67

**Toward Stance Classification Based on Claim Microstructures**
Filip Boltuzic and Jan Šnajder ........................................................................ 74

**Linguistic Reflexes of Well-Being and Happiness in Echo**
Jiaqi Wu, Marilyn Walker, Pranav Anand and Steve Whittaker ............................... 81

**Forecasting Consumer Spending from Purchase Intentions Expressed on Social Media**
Viktor Pekar and Jane Binner ........................................................................... 92

**Mining fine-grained opinions on closed captions of YouTube videos with an attention-RNN**
Edison Marrese-Taylor, Jorge Balazs and Yutaka Matsuo ................................. 102

**Understanding human values and their emotional effect**
Alexandra Balahur ......................................................................................... 112

**Did you ever read about Frogs drinking Coffee? Investigating the Compositionality of Multi-Emoji Expressions**
Rebeca Padilla López and Fabienne Cap .......................................................... 113

**Investigating Redundancy in Emoji Use: Study on a Twitter Based Corpus**
Giulia Donato and Patrizia Paggio ................................................................... 118
Modeling Temporal Progression of Emotional Status in Mental Health Forum: A Recurrent Neural Net Approach
Kishaloy Halder, Lahari Poddar and Min-Yen Kan ........................................ 127

Towards an integrated pipeline for aspect-based sentiment analysis in various domains
Orphee De Clercq, Els Lefever, Gilles Jacobs, Tijl Carpels and Veronique Hoste ............ 136

Building a SentiWordNet for Odia
Gaurav Mohanty, Abishek Kannan and Radhika Mamidi ....................................... 143

Lexicon Integrated CNN Models with Attention for Sentiment Analysis
Bonggun Shin, Timothy Lee and Jinho D. Choi .................................................... 149

Explaining Recurrent Neural Network Predictions in Sentiment Analysis
Leila Arras, Grégoire Montavon, Klaus-Robert Müller and Wojciech Samek ............... 159

GradAscent at EmoInt-2017: Character and Word Level Recurrent Neural Network Models for Tweet Emotion Intensity Detection
Egor Lakomkin, Chandrakant Bothe and Stefan Wermter ..................................... 169

NUIG at EmoInt-2017: BiLSTM and SVR Ensemble to Detect Emotion Intensity
Vladimir Andryushechkin, Ian Wood and James O´ Neill .................................... 175

Unsupervised Aspect Term Extraction with B-LSTM & CRF using Automatically Labelled Datasets
Athanasios Giannakopoulos, Claudiu Musat, Andreea Hossmann and Michael Baeriswyl .... 180

PLN-PUCRS at EmoInt-2017: Psycholinguistic features for emotion intensity prediction in tweets
Henrique Santos and Renata Vieira ................................................................. 189

Textmining at EmoInt-2017: A Deep Learning Approach to Sentiment Intensity Scoring of English Tweets
Hardik Meisheri, Rupsa Saha, Priyanka Sinha and Lipika Dey ................................. 193

YNU-HPCC at EmoInt-2017: Using a CNN-LSTM Model for Sentiment Intensity Prediction
You Zhang, Hang Yuan, Jin Wang and Xuejie Zhang .......................................... 200

Seernet at EmoInt-2017: Tweet Emotion Intensity Estimator
Venkatesh Duppada and Sushant Hiray ............................................................ 205

IITP at EmoInt-2017: Measuring Intensity of Emotions using Sentence Embeddings and Optimized Features
Md Shad Akhtar, Palaash Sawant, Asif Ekbal, Jyoti Pawar and Pushpak Bhattacharyya ...... 212

NSEmo at EmoInt-2017: An Ensemble to Predict Emotion Intensity in Tweets
Sreekanth Madisetty and Maunendra Sankar Desarkar ......................................... 219

Tecnolenguia Lingmotif at EmoInt-2017: A lexicon-based approach
Antonio Moreno-Ortiz ............................................................................................ 225

EmoAtt at EmoInt-2017: Inner attention sentence embedding for Emotion Intensity
Edison Marrrese-Taylor and Yutaka Matsuo ...................................................... 233

YZU-NLP at EmoInt-2017: Determining Emotion Intensity Using a Bi-directional LSTM-CNN Model
Yuanye He, Liang-Chih Yu, K. Robert Lai and Weiyi Liu ...................................... 238

DMGroup at EmoInt-2017: Emotion Intensity Using Ensemble Method
Song Jiang and Xiaotian Han .............................................................................. 243
UWat-Emote at EmoInt-2017: Emotion Intensity Detection using Affect Clues, Sentiment Polarity and Word Embeddings
Vineet John and Olga Vechtomova ...................................................... 249

LIPN-UAM at EmoInt-2017: Combination of Lexicon-based features and Sentence-level Vector Representations for Emotion Intensity Determination
Davide Buscaldi and Belem Priego ...................................................... 255

deeperCybErNet at EmoInt-2017: Deep Emotion Intensities in Tweets
Vinayakumar R, premjith b, sachin kumar s, soman kp and Prabaharan Poornachandran ....... 259
