Author comment on "Long-term and short-term inorganic carbon reservoirs in Aegean seawater – an experimental study" by Fabian Matthias Gåb et al., EGUsphere, https://doi.org/10.5194/egusphere-2022-564-AC1, 2022

We thank the reviewer for his comments and found them very helpful. We can see how the reviewer has found some parts of the manuscript repetitive. In a revised version of the manuscript we will take that into account and make the mentioned paragraphs more concise. To address the most severe point of this review, we find after rereading, that indeed the paragraph about nano-sized prenucleation clusters feels coming out of the blue. We will rework the manuscript here in a revised version, since the topic deserves extra attention. The appreciation of a „lean and intuitive“ style with a „clear aim of the paper“ by the reviewer encourages us to pursue a publication of the manuscript, although there are two quite negative reviews, which, among other things, criticize style and aim of the paper.
