Correction: How Does Cross-Reactive Stimulation Affect the Longevity of CD8+ T Cell Memory?

Vitaly V. Ganusov, Sergei S. Pilyugin, Rafi Ahmed, Rustom Antia

DOI: 10.1371/journal.pcbi.0020055

In PLoS Computational Biology, volume 2, issue 6:

The Figure 5 title and legend should read:

Figure 5. Variance of the Natural Logarithm of Size of Memory Lineages $\sigma^2_{\ln y}$ as the Function of the Number of Exposures in the Absence (squares, $\sigma^2_g = 0$) and Presence (diamonds, $\sigma^2_g \approx 6.9 \times 10^{-6}$) of Variation in Cross-Reactivity between Different Memory Lineages.

Other parameters are the same as in Figure 2B and 2D, and the mean cross-reactivity is kept the same at $g \approx 2 \times 10^{-3}$. Lines show the predictions according to Equation 9, $\sigma^2_{\ln y} = 2 \times 10^{-3}(\ln 2)^2 t (\sigma^2_g = 0)$ and $\sigma^2_{\ln y} = 2 \times 10^{-3}(\ln 2)^2 t + 6.9 \times 10^{-6} \cdot (\ln 2)^2 t^2 (\sigma^2_g > 0)$.

This correction note may be found online at DOI: 10.1371/journal.pcbi.0020097.
