Influence of Electronic Administration on Public Service Delivery among State Agencies in Kenya

Kenneth Goga Riany

ABSTRACT

E-Administration remains a key E-Government strategy that seeks to ensure the management of the government institutions and organizations if effectively done to enhance effectiveness and proper service delivery. The purpose of this study was to examine the influence of E-Administration on the public service delivery among state agencies in Kenya. The study adopted a descriptive research design to collect data from the target population comprising of 4230 employees within the management cadre at 132 specific government state agencies. Convenient sampling technique was used by the study to sample the respondents within the 132 specific government state agencies. A sampling formula was applied to calculate the sample size of 365 employees and self-developed questionnaires were used to collect data from the sample. Data was analyzed using descriptive and inferential statistics. The study found that E-Administration had a significant and positive influence on public service delivery by the state agencies in Kenya. The study further established that strategy execution had a significant moderating effect on the relationship between E-Administration and public service delivery by the state agencies in Kenya. The study recommended that the government through the state agencies should embrace E-Administration as a way of enhancing public service delivery. The management of state agencies should furthermore embrace strategy execution practices so as to enable success of E-Administration.

Keywords: Electronic Administration, E-Government Strategies, Strategy Execution, Public service delivery and State agencies.

I. INTRODUCTION

In the modern World where technology is becoming the order of the day, organizations in both public and private sector are focusing on strategic management as a way of steering their effectiveness and performance. Technology is also getting into strategy and one of the major aspects of strategies in the 21st century world is the electronic based administration or simply put – Electronic administration. It is the use of ICT to improve administrative processes and the internal working of departments within an organization [1].

Electronic administration has also been widely known as E-Management, is the use of ICT to improve administrative processes and the internal working of departments within an organization [1]. [2] states that while E-Services focus on so called “front–office” relations, E-Administration refers to the so called “back-office” organizational systems. E-Government strategies within this domain deal with improving management from streamlining internal processes, cross-departmental flow of information and include initiatives such as E-Mail, Integrated human resources and payroll systems, Integrated financial management systems, web-based collaborative data resources platforms, electronic filing systems, electronic document management (EDMS), E-Recruitment as well as enterprise resource planning [3].

E-Administration is the use of ICT to improve administrative processes and the internal working of an organization’s departments. It is based on various types of management work, internal routines, computerizing administrative jobs and realizing strategic connections among departments [4]. Globally E-Administration is changing the service delivery by reducing knowledge, increasing information access and control makes administration more informed, in a better position to understand and exercise its rights and E-Administration [5].

According to [6], given its back-office capability E-Administration is usually recognized as a precondition for developing E-Services and E-Democracy and to have well working E-Services. E-Administration is vital for the effective use and transfer of information, data and electronic records between various public institutions as it refers to the incorporation of ICT in public administrations from two perspectives: intra-office and inter-office. [7] states that E-Administration stands on the administrative modernization issue, on efficiency and efficacy of services and whether electronic services do or do not improve services to citizens.

Government performance is measured through service delivery and is therefore an essential function in the relationship between government and citizens [23]. In the 21st century, the growing demand for accountability and efficient...
The Government of Kenya enacted the Kenya E-Government as one of the strategies of E-Government in 2004 [8]. It was introduced to tackle public service delivery challenges, has since gained growth which is vital in facilitating economic development and the government continues to give utmost consideration thereto. Despite its efforts, Kenya has not achieved the intended ranking since 2012. According to a 2014 Public Service Commission evaluation report on the Public Service Compliance with Values and Principles in Articles 10 and 232 of the Constitution evaluation findings show that the public service, is making much effort at increasing the uptake of E-Administration in service delivery.

A. Statement of the Problem

The purpose of this study was to determine the influence of E-Administration on public service delivery among state agencies in Kenya. To achieve this, R ESEARCH METHODOLOGY

The study adopted a descriptive research design. The target population for the study was 4230 employees within the senior management cadre in 132 specific government state agencies. Purposive sampling was used to sample 365 respondents. The study administered questionnaires containing open ended and closed ended questions to all respondents via drop and pick approach. Data was analyzed using descriptive and inferential statistics. The regression model for this study was:

\[ Y = \beta_0 + \beta_1 X_1 + \varepsilon \]

The model for the moderating effect was as follows; where X is the predictor and Z is the hypothesized moderator.

\[ Y = a + B_1 X + Z + e \]
IV. RESEARCH FINDINGS

A. Response Rate

The study had a sample of 365 respondents who were surveyed using a structured questionnaire. A response rate of 81.6% (298 respondents) was achieved and the data used for analysis.

1) E-Administration

Findings imply that E-Administration was a key strategy of E-Government adoption by the state agencies. Through use of E-Administration, it was clear that communication was enhanced as well as properly coordinated information sharing and service delivery. The findings concur with [10] who found that E-Government was mainly enhanced by E-Administration whereby the state departments and agencies adopt electronic based communication and instructional procedures to deliver their mandate. As contended by [11], if an organization intent to achieve the value for its resources, using E-Administration strategies such as IFMIS would be the way to go. These findings also reap support from [18] who upholds the need for technological innovations in both public and private administration through which accountability, efficiency and proper management is achieved.

H3: E-Administration has no significant influence on service delivery by the state agencies in Kenya

The study sought to find out the statistical relationship between E-Administration and service delivery by the state agencies in Kenya. The statistical relationship between the two variables was sought through regression model whereby the output was generated in terms of model summary, ANOVA and regression coefficients. The findings on the model summary revealed that the R² for the model was 0.615 an indication E-Administration accounts for up to 61.5% variation of public service delivery among the state agencies in Kenya.

The regression coefficients shown in Table III on the other hand revealed that at a beta coefficient of 0.572, E-Administration significantly and positively influenced service delivery by the state agencies in Kenya at a significance level of 0.000. The model now becomes:

\[ Y = 5.739 + 0.572X + e \]

This implies that a unit change in E-Administration leads to 57.2% increase in service delivery by the state agencies in Kenya. This therefore gives a go-ahead to reject the null hypothesis of the study that E-Administration has no significant influence on service delivery by the state agencies in Kenya.

2) Moderating effect of Strategy Execution

The moderating influence of strategy execution on the relationship between E-Administration and public service delivery was established in the study.

Strategy execution process stands to steer the success of every strategy that an organization puts in place. Through effective means of executing a given strategy, the organization is able to streamline its operations towards the strategy and reap employees support on the same. The findings however show that strategy execution has not been effectively done in the state agencies surveyed. [9] contemplate that coming up with strategy is one thing and seeing the successful execution of the strategy is another.

The findings showed that strategy execution was recognized as a key aspect in steering adoption of E-Government strategies, but it was not properly done by the surveyed state agencies. The findings gain support from the contingency theory of management that upholds the need for strategy execution for strategic decisions to be successful through proper strategy formulation, situational analysis, strategy implementation and evaluation [26].

According to the results of the overall model, E-Administration had a significant and positive effect on performance of state corporations when moderated by strategy execution although the significance was lower.

| TABLE III: COEFFICIENT RESULTS FOR E-ADMINISTRATION |
|-----------------------------------------------|
| Unstandardized Coefficients | Standardized Coefficients | t     | Sig. |
| B (Constant) | 5.739 | 0.687 | 8.354 | 0.0000 |
| E-Administration [X₁] | 0.572 | 0.253 | 0.519 | 2.261 | 0.000 |

TABLE IV: REGRESSION COEFFICIENTS FOR THE MODERATED MODEL

| TABLE IV: REGRESSION COEFFICIENTS FOR THE MODERATED MODEL |
|----------------------------------------------------------|
| Model | Unstandardized Coefficients | Standardized Coefficients | Sig. |
|-------|-----------------------------|---------------------------|------|
| B (Constant) | 2.57 | 0.267 | -0.437 | 0.000 |
| E-A | -0.284 | 0.034 | -0.352 | 0.000 |
| E-Constant | 1.479 | 0.38 | -0.352 | 0.000 |
| E-A | -0.229 | 0.035 | -0.352 | 0.000 |
| S-E | 0.25 | 0.065 | 0.229 | 0.000 |
| E (Constant) | 3.247 | 0.615 | 0.229 | 0.000 |
| E-A | -0.312 | 0.036 | -0.48 | 0.000 |
| S-E | -0.122 | 0.125 | -0.112 | 0.331 |
| 1 | 0.041 | 0.007 | 0.376 | 0.000 |

The findings revealed that strategy execution was significantly and positively influenced service delivery by the state agencies in Kenya at a significance level of 0.000. The model now becomes:

\[ Y = 5.739 + 0.572X + e \]

This implies that a unit change in E-Administration leads to 57.2% increase in service delivery by the state agencies in Kenya. This therefore gives a go-ahead to reject the null hypothesis of the study that E-Administration has no significant influence on service delivery by the state agencies in Kenya.
V. CONCLUSION

The study sought to assess the influence of E-Administration on public service delivery by the state agencies in Kenya. The findings showed that most of the state agencies surveyed had adopted the major E-Administration aspects which include Electronic data interchange platforms, Integrated human resource and payroll systems, integrated financial management systems and Web-based collaborative platforms. The study concluded that E-Administration played a significant role in promoting delivery of public services by the state agencies in Kenya. Through adoption of Integrated Data Interchange and Integrated Human Resource and Payroll Systems, the management of the employees as well as access of customer data was enhanced thus streamlining service delivery to the citizens. The adoption of Integrated Financial Management Systems (IFMIS) enhanced accountability and effective use of public resources thus reducing wastage and achieving value for money among the agencies.

VI. RECOMMENDATIONS

E-Administration is an important step towards enabling running of the state agencies. The agencies through their management should therefore ensure that E-Administration is adopted through embrace of different aspects such as the Integrated Human Resource and Payroll Systems and Integrated Financial Management Systems. Through these systems, the agencies are able to achieve accountability and integrity in dealing with public funds as well as effectively managing the workforce to ensure productivity and commitment to service delivery. The management of state agencies could enhance the use of strategy execution practices so as to enable success of E-Administration strategies which are significant to enhanced public service delivery.
