Supplementary Figure 1. Effects of the CSE concentration on the MDMs viability. The MDMs were incubated with medium alone (Ctl) or with 2%, 4%, 8% or 10% CSE for 24h. The viability was assessed by an MTT assay. The data correspond to the mean ± SEM of 5 to 7 donors. * p<0.05, compared with the control.

Supplementary Figure 2. Effects of the CSE, LPS and CSE+LPS in the absence or presence of different inhibitors on the MDMs viability. The MDMs were incubated with medium alone (Ctl), LPS and CSE+LPS for 24h in the absence or presence of different inhibitors. The viability was assessed by an MTT assay. The data correspond to the mean ± SEM of 5 to 7 donors. * p<0.05, compared with the control.
