**Supplementary Figure 1.** Reverse-transcriptase Real-time PCR amplification plots of SARS-CoV-2 RNA detection in Conjunctival swab (A) and Nasopharyngeal swab (B). Each amplification curve line indicates ORF1ab, N gene and RNAase P (IC) as targets demarked by different colors. Amplification curve line above the threshold line and Ct value <40 was considered as positive and presence of RNase P (IC) signifies the experiment validity.
