Supplementary Figure 1.
Left showing full-length images of blots in Figure 6a.
All replicates are included in the blot. Right images showing high-contrast images of the original images to visible the membrane edges. Blue arrows indicate the membrane edges. The lower left image is β-actin image taken with a short exposure time. The area enclosed by the red line is used in the figures.
Supplementary Figure 2.

Left showing full-length images of blots in Figure 6b. All replicates are included in the blot. Right images showing high-contrast images of the original images to visible the membrane edges. Blue arrows indicate the membrane edges. The lower left image is β-actin image taken with a short exposure time. The area enclosed by the red line is used in the figures.
Supplementary Figure 3.
Left showing full-length images of blots in Figure 7a.
All replicates are included in the blot. Right images showing high-contrast images of the original images to visible the membrane edges. Blue arrows indicate the membrane edges. The area enclosed by the red line is used in the figures.
Supplementary Figure 4.

Left showing full-length images of blots in Figure 7b. All replicates are included in the blot. Right images showing high-contrast images of the original images to visible the membrane edges. Blue arrows indicate the membrane edges. The lower left image is β-actin image taken with a short exposure time. The area enclosed by the red line is used in the figures.
