Abstract: This research investigated the factors that influence perception of Thai consumers on facial herbal cosmetic products in Thailand. In-depth interview the perception of Thai consumers was utilized in data collection, while content analysis was employed in data analysis. The facial herbal cosmetics products are moisturizer, whitening lotions, creams, powder, toner, make up cleansing, mask, cleansing oil, soap bar, anti-aging lotions and creams. This study revealed that most of the interviewees were female with age between 26-30 years, casual worker, bachelor degree being the highest education and salary from 10,000 -15,000 baht ($285-430) per month. The marketing mix (4Ps: product, price, place and promotion) were the key factors influencing Thai consumers’ perception on facial herbal cosmetic products. The result found that Thai consumers were satisfied with physical appearance of products; texture, odor, penetration- characteristic and viscosity. Thai consumers trust in the safety of the Thai and imported products. The imported products have new manufacturing technologies of production compare with the Thai products but imported products are more expensive than Thai products. Thai consumers were satisfied with packaging design and pump bottle shape of imported products. Thai consumers found it was convenience to purchasing both herbal products from department store. The direct sale is popular only for Thai products. The imported products had more interesting marketing promotion than the Thai products. The marketing promotions are new product premium, promotion campaign eg. Cash discount, gift premium, fortune, tarot horoscope, makes up and massage workshop. Thai consumers were satisfied with advertisement of both herbal products; brochure, leaflet, beauty information from general magazine, fashion magazine, general book, television and radio. The economic situation, such as inflation situation, is the majority factor of purchasing decision. The average cosmetic budget per each purchase is 1,800 baht (about $50) at the rate of eight purchases per year.

Keywords: Perception, Thai Herbal Cosmetic Products, Imported Herbal Cosmetic Products

1. Introduction

Herbal have been used as medicines for a long time. Currently, it is still utilized as important ingredients of a few consumer products including cosmetic products. There are various types of herbals, which grow naturally in Thailand. As other Asian native, Thai people realize how to use herbals for medicine and for other purposes. Herbals are used more in cosmetic products for several reasons, which are natural origin, low price and user friendly. The cosmeceutical industry has responded these expectations by flooding the market with a diversity of products claiming to be natural (Marcoux, 1999). The new “active ingredients” are derived from nature for unique marketing stories and to reduce the risk of side effect. Today, there is growing consumer demand for personal care products containing natural and/or organic ingredients. In response, there has been a dramatic growth in the sales of natural and organic personal care products in drugstores and pharmacies across the world (Antignac et al., 2011). Marketing personnel are constantly analyzing the patterns of buying behavior and purchase decision. The consumption and purchase related decision as basic purchase or consumption decision, brand purchase or consumption decision; channel purchase decision and payment purchase decision. Understanding behavior of consumers is a key to success of herbal cosmetic business organization (Jalakkamali and Nikbin, 2010). Therefore; this research aims to study the roles of herbals in cosmetic products and to study the perception of Thai consumers on the local and imported products.

The objective of this study is to examine the factors that influence Thai consumer’s perception on herbal cosmetic products. To study the needs of Thai consumers on herbal cosmetic products.
2. Literature Review

The cosmetics and toiletries spent almost the same amount annually on beauty products ($1454). In addition, almost all participants (97 percent) used at least one cosmetic product daily, averaging 7.4 products and 4.4 brands every day (Guthrie and Kim, 2009). Evidently, Thai and imported herbal cosmetic products during 2006-2009 were optimistic. The growth rate is shown between 15-20 percent. During the economic slowdown, leading imported cosmetic companies have strong competition among the cosmetic supplier and distributors. All leading introduce new strategies by invest in promotional campaigns to keep theirs market share, stimulate the market but less marketing strategy of Thai herbal cosmetic products (Ministry of Finance, 2009). As manufacturers seek to create impact with performance, natural ingredients have become a key element of marketing strategies in cosmetic and toiletries, and natural's sales in the U.S. (Nancy, 2005).

The potential customers base of 18 million which women between the ages of 15 to 50 years old. Thailand’s market for cosmetic products has a very strong group of potential buyer (Cosmetic Products Market in Thailand, 2009). Adolescents and teenagers have a greater concerned on theirs health (Marcoux, 1999). Herbs and plants extract has been popular in many developed countries. The organic constituents in the cosmetics categorically place them as green market. In response to customers demand for products with natural origins and anti-aging, function. The product attractiveness, cost of product acquisition, communication and point of sales promotions offered to the cosmetic customers (Rajagopal, 2007). The Silesia Organics under the name of ‘Herbs for Life’ produced the hand made skin care products and ointments. It gained the only 100% organic certification for beauty products from the Soil Association (UK) (Rowey & Spiezia, 2006). Then personality of herbal cosmetic’s brand influences consumer attitudes towards a brand while brand attitude describes the positive or negative feelings consumers hold toward a specific brand. Brand personality is the group of human sincerity, excitement, competent, sophistication and ruggedness.

- Sincerity conveys warmth, acceptance, honesty and caring qualities.
- Excitement portrays sociability, energy, activity and youthfulness.
- Competence describes responsibility, dependability and security.
- Sophistication describes satisfaction upper class.
- Ruggedness describes glamorous and sexy brand.

The brand perception is associated with a higher level of consumer emotional response, higher levels of consumer trust and loyalty, higher consumer preference, usage, more self expression and improved product differentiation (Guthrie and Kim, 2009). The purchasing behavior between the U.S. and French cosmetic markets due to psychological factors, social influences and the purchase situation (Michael and Julie, 2002). The characteristics of the target market, the company’s experience, expertise, and executive preference should influence the selection of a strategy for building consumer brand preference. In an increasingly frenetic marketplace, successful development of brand preference rarely results by chance. Rather, it is a deliberate choice of strategy followed by intelligent implementation and patient, persistent execution (Alreck and Settle, 1999).

Since the Korean cosmetics, market was opened to multinational cosmetics companies, fierce battles have been fought between domestic and imported cosmetics. Especially in the high-end cosmetics market, imported cosmetics armed with high product quality and marketing capability performed better than local brands (Hwan, 2004). The growing retail segment and a good scope of manufacturing are two factors that mean future growth for the Indian market. The Indian cosmetics and toiletries market has seen major changes both in terms of user perception. The increasing market size is the direct result of the changing socio-economic status of the Indian consumers, especially women. Higher paying jobs and increasing awareness of the western world and beauty trends there have served to change the tastes and customs of the middle class and higher strata of the society, with the result that a woman from such social strata now is more conscious of her appearance and is willing to spend extra cash on enhancing the further. Numbers of women, especially from the middle-class population, have more disposable income leading to a change in cosmetic and skin care products consumption (Bhattacharya, 2006).
3. Methodology

The study is qualitative research using in-depth interview to collect the data and use content analysis to explained the data.
