S8 Fig. Mtl1 mediates interaction between Rrp6 and Mmi1.
Expression of rec8 mRNA and spo5 mRNA in mtl1-cs5 cells expressing Mtl1 and Rrp6-GFP-Mmi1 from plasmids. Cells were grown in liquid MM medium at 30°C and shifted to 20°C for 2 hours. Transcripts were quantified by RT-qPCR and normalized to act1. Error bars represent standard error of three independent samples. *P < 0.05; **P < 0.01 compared with cells carrying empty vector at 20°C (Student’s t-test).
