A 21 year old man was complaining of pain in a toe with swelling, which was interfering with his walking. The lesion was itchy and nodular. He thought he had been bitten and the insect had left a bump and black mark on the skin.

Infection from Tiny, Unwanted Travel Companions

50 year old woman presented at surgery on return from a holiday in Tanzania. She was complaining of multiple, small red, very itchy, lesions scattered round her waist line, on the inside of thighs and upper arms. She had been scratching these areas and there was now reddened skin, with lacerations on her thighs, seeping of the wounds and small patches of sepsis.
