Introduction. The global social changes taking place in the Ukrainian society require young people to have qualities that will help them easily adapt to today's fleeting conditions, take responsibility for their own actions, be active, communicative, organized, and thus have highly developed leadership qualities. Therefore, higher education in Ukraine is required to prepare a graduate who is competitive not only in the Ukrainian state, but also competent, able to work and be realized on a global scale.

The Laws of Ukraine «On Education», «On Higher Education», the National Strategy for Education Development of Ukraine for 2011–2021, specify a number of effective mechanisms for developing leadership qualities of future teachers, in particular, through their active involvement in student government.

Analysis of previous research on the problem. Well-known domestic and foreign educators and psychologists, in particular D. Kreims (2007), S. Kalashnikova (2010), T. Kochubei (2012), O. Romanovskyi (2013) etc. considered the problem of educating leaders, creating conditions for the development of leadership qualities of the individual.

Leadership qualities of higher education students became the subject of dissertation research by O. Koriakina, A. Tiniakova, Yu. Krashchenko, V. Moroz and others. Yu. Krashchenko (2012) substantiated and experimentally tested the effectiveness of the youth project «School of Local and Student government «Leader of the Future» in the development of leadership qualities of future teachers. O. Koryakin’s (2015)
the development of constructive leadership of future masters of the humanities in the process of professional training. V. Moroz (2015) focused on the organizational and methodological conditions for the formation of leadership qualities of students of higher educational institutions in the process of student government.

The analysis of scientific research revealed that the purposeful development of leadership qualities of students increases their success, increases students' political popularity in the classroom, makes students more likely to take initiative, and shapes students' beliefs about the determinants of success, affects the development of human capital (Anderson, Fangwen Lu, 2017). Thus, an experimental study by E. Goldman et al. (2021) proved that role plays and action plans helped participants apply and practice leadership skills; self-assessments and feedback from peers and mentors provided specific details for focusing development efforts; and personal growth exercises provided opportunities to reflect and consider fresh perspectives. The conducted analysis of scientific researches showed insufficient attention of scientists to the development of leadership qualities of future teachers. Therefore, we consider it expedient to carry out a theoretical substantiation of the essence of leadership qualities of future teachers and determine the influence of participation in student government on their formation.

The analysis showed that the research relates to certain aspects of the development of leadership qualities of future professionals in various fields. They are aimed at the development of leadership in the process of professional training, the activities of student assets. The authors emphasize the formation of such leadership qualities as leadership skills, communication skills, organizational skills, and the ability to influence followers (Yu. Krashchenko, 2012); activity, initiative, perseverance, independence (V. Moroz, 2015). However, the issues of developing such leadership qualities of higher educational institutions as responsibility, critical thinking, creativity, emotional intelligence, social activity, strategic vision in the process of student government remain insufficiently researched.

**Purpose:** based on the results of the analysis of scientific works to theoretically substantiate the set of leadership qualities of teachers, and determine the impact of the game method on the development of leadership qualities of applicants for higher pedagogical education in the process of student government.

**Research methods.** Theoretical methods of analysis, synthesis, comparison and systematization were used to determine the set of leadership qualities of a teacher and substantiate game method for developing leadership qualities of applicants for higher pedagogical education in the process of student government.

**Results of the research.** Based on the analysis of interpretations by various sources of the concept of «leadership» as a key definition, we found that in dictionaries it is considered from several points of view: «as part of the socio-psychological mechanism of integration of group activities, through which a person or several people role, direct the activities of the group in both productive and non-productive spheres», as «the influence of authority (formal or informal) of the individual on the behavior of group members or the primary team as a whole» (Sociology: a short encyclopedia dictionary), as a symbol of power and influence within a social group; that is, to function as a leader means to exercise leadership.

Analysis and comparison of researchers' views on the meaning of the concept of «leadership» (S. Kalashnikova, T. Kochubei, Yu. Krashchenko, Reber, O. Romanovskyi, etc.), allowed us to determine that leadership is a certain type of influence of an authoritative person on a group of people in order to achieve common goals and needs. The author of numerous books on leadership, D. Kreims (2007) defines leadership qualities as «internal traits or abilities that allow a leader to act effectively, while contributing to the development of the organization» (p. 83). N. Marakhovska (2009) defines the leadership qualities of a teacher as an integrated personal education that contributes to the quality of pedagogical activities, names the following components: motives, knowledge, leadership skills, a stable leadership position. V. Sypchenko (2012) positions leadership qualities as «a kind of socio-psychological qualities of the individual, which reflects a person's attitude to people and society in general, they are manifested in his social behavior and actions» (p. 49). The author is convinced that the formation of leadership qualities should be the core direction of professional training of future teachers.

Leadership qualities of the individual, as well as any other components of the personality structure, must be measured, classified and characterized. The criteria for the development of leadership qualities, described by N. Diatlenko (2014), are the following: the internal readiness of the subject to be a leader, which includes a motivational component (internal readiness to accept the role of leader, desire to perform the functions of a leader, interest in the leader); cognitive component (understanding of the tasks, knowledge of organizational algorithms, knowledge of the rules of effective communication in different situations); practical-effective, which includes the activity component (performance); personal- positional component (perception of the leader by the group, perception of the group by the leader).

As a result of the research, V. Moroz (2015), singled out a list of general leadership qualities of the individual (p. 5):

1) competence – knowledge of the case in which a person manifests himself as a leader;
2) activity – the ability to act vigorously;
3) initiative – putting forward ideas, suggestions;
4) sociability – openness to others, willingness to communicate;
5) intelligence – the ability to get to the heart of the phenomena, to see their causes and consequences, to determine the main thing;
6) persistence – a manifestation of willpower, perseverance, the ability to bring the case to an end;

research concerns the pedagogical conditions for the development of constructive leadership of future masters of the humanities in the process of professional training. V. Moroz (2015) focused on the organizational and methodological conditions for the formation of leadership qualities of students of higher educational institutions in the process of student government.
7) self-control – the ability to control their own feelings, their behavior in difficult situations;
8) observation – the ability to see, in passing to note the important;
9) efficiency – endurance, ability to work hard;
10) independence – independence in judgments, the ability to take responsibility;
11) organization – the ability to plan their own activities, to show consistency, concentration».

Having analyzed American scientists researches, O. Ponomarenko (2011) focuses on the results that allowed forming a «portrait of a teacher-leader». It is based on five components, namely personal qualities, abilities, self-knowledge, knowledge of others, character. Personal qualities include energy, camaraderie, and charisma. It is noted that the abilities of a teacher-leader mean his intelligence, experience, mental skills, system worldview, and information culture and so on. The teacher's knowledge of himself presupposes the presence of such a quality as «emotional intelligence, which is characterized by self-discipline, the ability to control destructive emotions, flexibility in behavior and self-esteem». The components of «self-knowledge» include psychological health and faith in yourself and your strength.

The author notes that the result of «knowledge of others» is the presence of such qualities in a teacher-leader as: empathy and communication skills. The described portrait features of the character of a teacher-leader reflect the views on life, the integrity of beliefs and faith, the ability to know and objectively assess pedagogical situations and processes; the ability to reflect and analyze their own and team activities or behavior in order to find the best ways to solve problems; the ability to present his ideas and visions so that they are clear and carry a deep social and personal meaning, meaning;

3) trust management (the leader’s ability to overcome fears, mistrust, communication barriers that prevent his followers from fully trusting him);
4) self-management (the ability to objectively assess their strengths and weaknesses, skilfully compensating for their shortcomings by the strengths of their subordinates).

We fully agree with the proposed distribution of groups of qualities and the leadership qualities of the individual indicated in them, because the essence of modern teacher’s activity is the ability to present goals to students and design future results or activities in such a way that motivates students to active learning. The teacher must communicate his ideas and visions at such a level of communication that they are not only understandable to students, but also grow into their personal needs and beliefs, which can be realized in a trusting, partnership relationship between teacher and students. The most important component of the leadership qualities of a teacher-leader is the ability to identify their own strengths and weaknesses, skilfully compensating for their shortcomings with the strengths of their wards, the ability to present their students and class so that students believe in their own strengths and capabilities.

V. Karmanenko (2019) believes that the leadership qualities of students should be attributed to «a variety of socio-psychological qualities of the student’s personality, which reveal his attitude to other people and society in general, allow him to effectively influence student group members, and create a positive atmosphere in the team» (p. 53).

From our point of view, M. Vudkok and D. Frensis presented the determinant qualities of leadership quite thoroughly. Researchers include the following qualities:
1. Extraversion (represented by such characteristics as persistence, energy, activity).
2. Neuroticism (represented by such characteristics as emotional stability, confidence, endurance).
3. Consciousness (represented by such characteristics as organization, responsibility, reliability, persistence).
4. Benevolence (represented by such characteristics as willingness to cooperate, altruism, kindness) (Cited by Diatlenko, 2014).

The conducted analysis allowed determining the set of leadership qualities of a modern teacher who will successfully work in a secondary school and implement the Concept of the New Ukrainian School:
1) initiative (internal motivation, desire to produce and implement ideas that will benefit the team);
2) organization (constructive planning and streamlining not only of their activities but also of the team);
3) communicativeness (the presence of stable personality traits that contribute to the successful reception, understanding, assimilation, use and transmission of information);
4) responsibility (awareness of their own actions and their consequences for the team);
5) creativity (production of fundamentally new ideas that will contribute to the rapid and effective solution of team tasks);
6) critical (the property of thinking, which is the ability to reflect and analyze their own and team activities or behavior in order to find the best ways to solve problems);
7) research qualities (manifested in observation, the ability to know and objectively assess pedagogical situations and processes);
8) emotional intelligence (understanding of their emotions and feelings of other people in order to form a positive psychological climate as a guarantee of success of teamwork);
9) social activity (manifested in the ability of the individual to purposeful interaction with the environment and is based on its needs and interests and manifests itself as a conscious inner readiness to act);
10) strategic vision (perspective view of the development and activities of the team, aimed at a preliminary assessment of the results of work);
11) ability to work in a team (focus on interaction between team members and the ability to distribute responsibilities);
12) social adaptability (adaptation of the individual to the requirements and expectations of the participants of the new or changed group);
13) the ability to lead (the ability to inspire, guide, motivate the team to work);
14) tolerance (ability to show respect for others and acceptance of their differences);
15) willingness to come to the rescue;
16) honesty and reliability.

Leadership qualities of future teachers are being developed in the educational process of higher education institution: during the study of disciplines of professional training, participation in educational activities, practical training, etc. The subject of our study is the development of leadership qualities of future teachers and determine the impact on their formation of activities in student government.

The Law of Ukraine «On Higher Education» (2014) defines the system of student government «as a holistic structural mechanism that allows students through self-organized activities to participate in the management of their staff in cooperation with all governing bodies of higher education, protect their rights and interests, promote harmonious development personality of the future specialist, cultivating leadership qualities, social activity». This requires the development of new approaches to the process of developing leadership qualities in future teachers that meet the requirements and value system of civil society (Article 40).

Manifestations of leadership qualities of future teachers are persistent active, responsible social behavior and actions aimed at organizing and managing relationships in the group to achieve collective goals, solve problems and find optimal solutions. Carrying out active activity in student government bodies at the level of academic group or Student council of an educational institution, a student will develop the above-mentioned qualities. Becoming a member of student government, a young person consciously assumes the role of student leader, who must be endowed with certain personal qualities.

As noted by A. Kurytsia and D. Kurytsia (2014), the process of development of leadership qualities of students should be part of a holistic pedagogical process of free education and be based on special conditions that ensure its effectiveness (p. 356). Scientists have identified the following psychological and pedagogical conditions for the effective development of leadership qualities of students:
- taking into account individual psychological characteristics and the development of student leadership motivation;
- development of responsibility (from concrete situational to responsibility as a stable personal property) as a basis of responsible leadership;
- creation of a developmental personality-oriented environment in training and real educational and extracurricular interaction of students, which is marked by relevant characteristics (content of activity, group dynamics, problems, reflection); aimed at developing responsibility as the basis of leadership;
- ensuring the purposeful development of leadership qualities of boys and girls through the organization of student staff, student government and the use of interactive forms of work (trainings, role-playing games) (Kurytsia & Kurytsia, 2014, p. 356).

Summarizing the approaches of scientists, we note that student government is the center in which the personal qualities of young people are honed. After all, before becoming a leader of the environment, a person must form the appropriate qualities that will help him to take a leadership position. By participating in the activities of the student council, future teachers develop the ability to interact with the environment, work in a team, and communicate. M. C. Veronesi and R. B. Gunderman (2012) argue that the experience of student participation in student organizations meets 6 principles of leadership development: ownership, experience, efficacy, sense of community, service learning, and peer-to-peer mentoring. Hsien-Hsien Lau et al. (2014) investigated the positive correlation of graduate participation in various extra-curricular activities and communication, leadership, creativity and self-promotion skills formed during this activity. Researchers have concluded that such activities help graduates in employment.

The use of game technologies actively influences the development of leadership qualities of student youth, formation of skills to plan and forecast their own team activities, several skills such as teamwork, negotiation, social skills or critical thinking (I. Filibi & I. Alonso, 2015; B. Howard et al, 2014). Research by L. Gjedde (2013) dedicated to how live action role-game playing can function as an overarching framework for learning may offer fresh insights into game-based learning in terms of multimodality, flexibility in the design of games and the role and interactivity of the learner and teacher. The scientist calls role-playing games a platform for creative and collaborative learning that enhances the learners’ motivation and zest for learning while developing 21st century learning skills.

N. Kravets and O. Grechanovska (2017) note that «game technologies are a special teaching method that involves learning material and the content of education, forms the interaction of teacher and student through the game, as well as helps to find and get the desired goal, i.e. to achieve a certain result». Game technologies include the following: exercise games, game discussion, business educational game, role play, etc.

For example, we give the sequence of preparation...
and conduct of the role play «Student government Day», tested by us in Municipal Institution of Higher Education «Bar Humanitarian Pedagogical College named after Mykhailo Hrushevsky» (Fig. 1).

![Diagram](image_url)

Figure 1. Role play «Student government Day»

Developed by the author

First, there is an organizational meeting, where members of the Student council of higher education institution discuss issues related to the preparation and conduct of the event: division of responsibilities among members of the student council, determination of persons responsible for individual preparatory stages, budgeting members of the college administration among members of the student government. Usually, each member of the student council chooses the role to play during the game. However, among the members of the student council there may be several who want to try themselves in the role of «head of the department» or «dean of the faculty», in this case, we use a draw: the sheet lists the roles that have not yet been selected by the students, and it is suggested that they «blindly» choose their future position.

Traditionally, role-playing takes place on Student’s Day, which is celebrated in Ukraine on November 17. On the day of the game, students play the roles of the head of HEI and his deputies, the dean of the faculty, heads of departments, employees of the social and psychological service, etc. Conducting a role play aims to form business, leadership qualities of all its participants and awareness of responsibility for the quality organization of the educational process, as training sessions must take place at the appropriate level. Note that classes with students are also conducted by the students themselves. To do this, a college student who wants to try himself as a teacher of the discipline, receives permission from the teacher and a series of consultations that allow you to conduct interesting, high-quality and productive classes, and most importantly, make sure you have the appropriate pedagogical skills and professional skills. Considering that the college trains specialists not only in the pedagogical profile, students majoring in «Law» and «Journalism» are also very happy to conduct classes in their academic groups and for junior students. In the format of a round table, there is an extended meeting of the leadership of the higher education institution with members of the «student administration» – performers of roles who during the day not only mastered new life and professional experience, but also delegated their powers within their roles. During the meeting, important issues related to the organization of the educational process are discussed for all participants and the results of the role play are summarized.

The role-playing game usually ends with a holiday concert. Joint concert numbers, where the student and teacher show their skills in pairs, show the participants a wonderful concert performance of modern and classical potpourri, the artistry of the actors involved in humorous sketches will not leave anyone in the hall without a cheerful mood. At the celebrations, all attendees receive congratulations from the «young director of the college» (chairman of the student council) and the head of the educational institution, who focus their efforts on creating a favourable psychological climate in the college and its development.

Positive feedback on the Day of Student Self-Government in the college from all participants in the educational process, indicate that not only students but also their mentors-teachers, with great pleasure spent the day in informal communication. Quite often, teachers manage to find in students with whom they have worked for more than a year, completely different personal qualities, which contributes to the formation of favourable relationships in the system «teacher-student». At the same time, students have the opportunity to once again «see» their teachers in another role, hear interesting stories about their student years and get through the atmosphere of their student life. For 6 years in a row role-playing has shown that role-playing has
encouraged students to be more aware and responsible about their responsibilities as members of the student council. During the preparation and conduct of the game, they were proactive, creative, resourceful, demonstrated effective teamwork. The interpersonal relations of the members of the Student council were marked by a change in the forms of interaction; there was an understanding of each other, a desire not to let the team down, a willingness to come to the rescue. The heads of student government, whose council members participated in the role-playing game «Student government Day», noted that their teams have become more organized, responsible, proactive, reliable, tolerant and able to set a goal and achieve it.

**Conclusions.** The conducted theoretical analysis of scientists’ views on the concepts of «leadership» and «leadership qualities» made it possible to determine a set of leadership qualities of a teacher, which includes: activity, initiative, persistence, self-control, observation, independence, organization, communication, responsibility, creativity, critical thinking, emotional intelligence, strategic vision, ability to work in a team, social adaptability and the ability to lead. This set of leadership qualities of a teacher we consider it necessary to divide into components as follows: personal qualities of the teacher, pedagogical abilities and professional qualities.

The influence of student government on the development of leadership qualities of future teachers is determined, which is to involve student youth in organizing and conducting various events: role-playing, trainings, quests, fairs, photo exhibitions, holiday concerts, celebrations, and volunteering. It opens opportunities for each student to try himself not only as a participant in the event, but at different levels of organization and conduct, to take an active part in shaping the educational environment of the educational institution, to feel not only an ordinary student, but a full partner.

Among the various forms of student government, the use of role-playing as a component of interactive technology that can ensure the formation of future teachers the necessary leadership skills for successful professional activity in the modern education system and the New Ukrainian school.

We see prospects for further research in the development of tools for diagnosing the development of leadership qualities of students of higher pedagogical education in the process of student government.

ВПЛИВ СТУДЕНТСЬКОГО САМОВРЯДУВАННЯ НА РОЗВИТОК ЛІДЕРСЬКИХ ЯКОСТЕЙ МАЙБУТНЬХ ПЕДАГОГІВ

Гулько Олена, викладач кафедри педагогіки, психології та фахових методик, КЗВО «Барський гуманітарно-педагогічний коледж імені Михайла Грушевського», майдан Грушевського, 1, 23000 Бар, Україна, guikolen@ukr.net

У статті теоретично обґрунтовано вплив участі в студентському самоврядуванні на розвиток лідерських якостей майбутніх педагогів. Визначено комплекс лідерських якостей сучасного вчителя, що формується в здобувача вищої освіти під час навчання у закладі вищої освіти, а саме: ініціативність, організованість, комунікативність, відповідальність, креативність, критичність, дослідницькі якості, емоційний інтелект, соціальна активність, стратегічне бачення, уміння працювати в команді, соціальна адаптивність, здатність вести за собою, чесність і надійність. Наведені якості допоможуть майбутньому педагогу здійснювати власну професійну діяльність на високому рівні: сприяти розвитку вміння швидко налагоджувати контакти, спрямувати роботу класу, знайти нестандартні варіанти вирішення проблемних питань, формувати в діяльності внутрішнє оточення, ставити близькі та далекі життеві цілі і досягати їх, відчувати і розуміти внутрішні світи другіх, робити бальзам для душі, працювати в команді тощо. Зазначене свідчить, що випускник закладу вищої освіти має володіти повним набором лідерських якостей, які сприятимуть його успішній професійній діяльності та здійснюватимуть активний вплив на розвиток відповідних якостей у його учнів.

Акцентовано студентське самоуправління як самоорганізована діяльність, яка розвиває лідерські якості студентів, наставників та викладачів у класі та викладаць в громадській діяльності, критичне мислення. Запропоновано приклад реалізації ролової гри «День студентського самоврядування», апробований нами в Барському гуманітарно-педагогічному коледжі імені Михайла Грушевського, як складової частини інтерактивної технології, спрямованої на розвиток лідерських якостей майбутніх педагогів у процесі захисту до діяльності органів студентського самоврядування.

Ключові слова: вчитель-лідер, лідерство, лідерські якості, майбутній педагогічний працівець, розвиток лідерських якостей, студентське самоврядування.
ВЛИЯНИЕ СТУДЕНЧЕСКОГО САМОУПРАВЛЕНИЯ НА РАЗВИТИЕ ЛИДЕРСКИХ КАЧЕСТВ БУДУЩИХ ПЕДАГОГОВ

Гулько Елена, преподаватель кафедры педагогики, психологии и профессиональных методик, Барский гуманитарно-педагогический колледж имени Михаила Грушевского, площадь Грушевского, 1, 23000 Бар, Украина, gulkolena@ukr.net

В статье теоретически обосновано влияние участия в студенческом самоуправлении на развитие лидерских качеств будущих педагогов.

Определен комплекс лидерских качеств современного учителя, который формируется у соискателей высшего образования, а именно: инициативность, организованность, коммуникабельность, ответственность, креативность, критичность, исследовательские качества, эмоциональный интеллект, социальная активность, стратегическое видение, умение работать в команде, социальная адаптивность, способность вести за собой, толерантность, готовность прийти на помощь, честность и надежность. Приведенные качества помогут будущему педагогическому работнику осуществлять собственную профессиональную деятельность на высоком уровне: способствовать развитию умений быстро налаживать контакты, направлять работу класса, находить быстрые и нестандартные варианты решения проблемных вопросов, чувствовать и понимать внутренний мир окружающих, ставить близкие и дальние жизненные цели и достигать их, работать в команде и т. д. Указанное свидетельствует, что выпускник высшего учебного заведения должен обладать полным набором лидерских качеств, способствующих его успешной профессиональной деятельности, и осуществлять активное влияние на развитие соответствующих качеств у его учеников.

Акцентировано студенческое самоуправление как самоорганизующаяся деятельность, которая развивает лидерские качества студентов, навыки работы в команде, умение планировать и прогнозировать собственную деятельность, креативность, критическое мышление. Предложен пример реализации ролевой игры «День студенческого самоуправления», апробированной нами в Барском гуманитарно-педагогическом колледже имени Михаила Грушевского, как составной части интерактивной технологии, направленной на развитие лидерских качеств будущих педагогов в процессе вовлечения в деятельность органов студенческого самоуправления.

Ключевые слова: будущий педагогический работник; лидерство; лидерские качества; развитие лидерских качеств; студенческое самоуправление; учитель-лидер.
