Abstract

Eight species of the genus Ischnothyreus Simon, 1893 from Xishuangbanna, Yunnan, China are recognized, including six new species: I. cristiformis Tong & Li, sp. nov. (♂♀), I. mangun Tong & Li, sp. nov. (♂♀), I. mengyang Tong & Li, sp. nov. (♂♀), I. peltifer (Simon, 1892), I. qidaoban Tong & Li, sp. nov. (♂♀), I. qiuxing Tong & Li, 2020 (♂♀), I. sijiae Tong & Li, sp. nov. (♀) and I. xiaolongha Tong & Li, sp. nov. (♂♀). The male of I. qiuxing Tong & Li, 2020 is described for the first time. Photos of the habitus and copulatory organs are provided.

**Introduction**

Oonopidae Simon, 1890 is a diverse spider family with 1872 extant described species in 114 genera. They have a nearly worldwide distribution but are most abundant in the tropics and subtropics (WSC 2021).

Xishuangbanna is a key biogeographic area and a biodiversity hotspot in China (Myers 1988). Spider diversity in this area is high, with 782 species spanning 305 genera in 46 families (Li 2020). The Oonopidae from this region have been poorly studied, with only 2 genera and 10 species recorded so far (Tong and Li 2015a, 2015b; Sun et al. 2019).

Ischnothyreus Simon, 1893 is one of the most speciose genera of the family, with 114 extant species mainly distributed in the Old World (WSC 2021). Up to now, 15 species have been recorded in China (Tong and Li 2008, 2012, 2014; Tong et al. 2018; Liu et al. 2019). In this paper eight *Ischnothyreus* species collected from Xishuangbanna are reported. This work presents the first records and descriptions of species in the genus *Ischnothyreus* from this region.

**Materials and methods**

The specimens were examined in 95% ethanol using a Leica M205C stereomicroscope. Details were studied with an Olympus BX51 compound microscope. Photos were taken with a Canon EOS 750D zoom digital camera (18 megapixels) mounted on an Olympus BX51 compound microscope. Vulvae were cleared in lactic acid. Scanning electron microscope images (SEM) were taken under high vacuum with a Hitachi TM3030 after critical point drying and gold-palladium coating. All measurements were taken using an Olympus BX51 compound microscope and are given in millimeters in the text. The specimens are preserved in Shenyang Normal University (SYNU) in Shenyang, China.

The following abbreviations are used in the text and figures: a = apodemes; ALE = anterior lateral eyes; ass = anchor-shaped structure; bsa = bell-shaped atrium; ccp = cockscomb-shaped process; cd = central oval depression; csa = circular atrium; css = central strongly sclerotized structure; fsp = finger-shaped process; hsm = hook-shaped membrane; hsp = helmet-shaped process; llm = lamella-like membrane; lpp = leaf-shaped prolateral projection; lsp = large, sclerotized process; mlp = mushroom-like projection; nsa = nipple-shaped atrium; nsm = needle-shaped membrane; oa = opening of the atrium; PME = posterior median eyes; PLE = posterior lateral eyes; rl = retrolateral lobe; rol = round lobe; rsa = rectangular-shaped atrium; stp = strong, tooth-like projection; tlp = tuber-like projection; tsm = thread-shaped membrane; tsp = tongue-shaped process; vpr = ventral protuberance; wt = winding tube.
**Taxonomy**

*Family Oonopidae Simon, 1890*

*Genus Ischnothyreus* Simon, 1893

*Ischnothyreus cristiformis* Tong & Li, sp. nov.

http://zoobank.org/F27DFEC6-EED4-4695-A551-1004663BED38

Figures 1–3, 20A–C, 22A, B, 23A, B

**Type material.** *Holotype♂*: China, Yunnan, Mengla County, Xiaolongha, Xishuangbanna Biodiversity Conservation Corridor, montane monsoon forest; 21°24.161′N, 101°36.412′E; 791 m; 16.VI.2013; Q. Zhao and Z. Chen leg. (SYNU-379). *Paratypes*: 1♀: same data as for holotype (SYNU-380); 3♂1♀: Xiaolongha, Xishuangbanna Biodiversity Conservation Corridor, Qidaoban, valley forest; 21°24.808′N, 101°37.874′E; 711 m; 18.VI.2013; Q. Zhao and Z. Chen leg. (SYNU-381–384).

**Diagnosis.** The new species is similar to *I. mangun* sp. nov. and *I. xiaolongha* sp. nov. by the lamella-like membrane of the male palp and short dorsal abdominal scutum, but can be distinguished by the large cockscomb-shaped sclerotized process (Fig. 1H–J) of the male cheliceral fang (vs the unmodified cheliceral fang (Fig. 4H, I) in *I. mangun* sp. nov. and the tongue-shaped sclerotized process (Fig. 17H–J) in *I. xiaolongha* sp. nov.), the broad rectangular-shaped retrolateral lobe of the bulb (Fig. 2F) (vs the leaf-shaped lobe (Figs 5F, 18F) in *I. mangun* sp. nov. and *I. xiaolongha* sp. nov.). The female differs from *I. mangun* sp. nov. and *I. xiaolongha* sp. nov. by the large bowl-shaped atrium (Fig. 3H) (vs small rectangular-shaped atrium (Fig. 6F) in *I. mangun* sp. nov. and small bell-shaped atrium (Fig. 19H) in *I. xiaolongha* sp. nov.).

**Description. Male (holotype).** *Body*: habitus as in Fig. 1A–C; body length 1.64. *Carapace*: 0.88 long, 0.65 wide; yellow, with egg-shaped patches behind eyes, surface of elevated portion of pars cephalica smooth, sides finely reticulate, lateral margin straight, smooth (Fig. 1D, E). *Clypeus*: height about 2/3 of ALE diameter (Fig. 1G). *Eyes*: see Fig. 1D, G. *Sternum*: pale orange (Fig. 1F). *Mouthparts*: chelicerae, endites and labium orange; chelicerae straight, base of fangs with large cockscomb-shaped sclerotized process, fang groove with a few small denticles (Figs 1H–J, 22A, B); anteromedian tip of endites with one strong, tooth-like projection (Fig. 1F). *Abdomen*: 0.76 long, 0.44 wide; dorsal scutum well sclerotized, pale orange, covering 1/3 of the abdomen width and approximately 2/3 of the abdomen length, fused to epigastric scutum; epigastric and postgastric scute well sclerotized, pale orange, fused, postgastric scutum covering about 2/3 of the abdomen length (Fig. 1A–C). *Legs*: pale orange, femur I with 2 prolateral spines, tibia I with 4 pairs, metatarsus I with 2 pairs of long ventral spines. Leg II spination similar to leg I except femur with only 1 prolateral spine. Legs III and IV spineless. *Palp*: trochanter with ventral projection, cymbium brown; bulb with 2 ventral protuberances, one large and another very small,
Figure 1. *Ischnothyreus cristiformis* sp. nov., male holotype A–C habitus, dorsal, lateral and ventral views D–G prosoma, dorsal, lateral, ventral and anterior views H–J left chelicerae, anterior, posterior and lateral views. Abbreviation: stp = strong, tooth-like projection. Scale bars: 0.4 mm (A–G); 0.1 mm (H–J).
Ischnothyreus from Xishuangbanna, China (Araneae, Oonopidae)

**Figure 2.** *Ischnothyreus cristiformis* sp. nov., male holotype, left palp, SEM A–C prolateral, retrolateral and dorsal views D, E palpal bulb, prolateral and retrolateral views F–H distal part of palpal bulb, dorsal, prolateral and retrolateral views. Abbreviations: llm = lamella-like membrane; rl = retrolateral lobe; rol = round lobe; tsm = thread-shaped membrane; vpr = ventral protuberance.

The distal end of bulb elongated, with numerous lamella-like membranes, retrolateral lobe broad, rectangular-shaped (Figs 2, 20A–C).

**Female (paratype, SYNU-380).** Same as male except as noted. **Body:** habitus as in Fig. 3A–C; body length 1.76. **Carapace:** 0.72 long, 0.67 wide. **Mouthparts:** chelicerae and endites unmodified. **Abdomen:** 1.05 long, 0.67 wide; dorsal scutum covering 1/3 of the abdomen length, about 1/4 of the abdomen width. **Epigastric area:** postgastric scutum with strongly sclerotized structure in the middle (Fig. 3H). **Endogyne:** from the middle of the slightly thickened margin of the postgastric scutum runs a dark, simple winding tube, ending in a large bowl-shaped atrium (Fig. 23A, B).

**Etymology.** The specific name is a Latin adjective and refers to the large cockcomb-shaped sclerotized process of the cheliceral fang.

**Distribution.** Known only from the localities of the type series.
Figure 3. *Ischnothyreus cristiformis* sp. nov., female paratype A–C habitus, dorsal, lateral and ventral views D–G prosoma, dorsal, lateral, ventral and anterior views H epigastric region, ventral view. Abbreviation: css = central strongly sclerotized structure; Scale bars: 0.4 mm (A–G); 0.2 mm (H).

Figures 4–6, 20D–F, 22C, D, 23C, D

**Type material.** **Holotype** ♂: China, Yunnan, Menghai County, Mangun Stockaded Village, Xishuangbanna Natural Reserve, secondary forest; 22°02′12″N, 100°23′28″E; 1179 m; 20.III.2016; S. Li leg. (SYNU-385). **Paratype.** 1 ♀: same data as for holotype (SYNU-386).

**Diagnosis.** The new species is similar to *I. cristiformis* sp. nov. and *I. xiaolongha* sp. nov. in the lamella-like membrane of male palp and the short dorsal scutum of the abdomen, but can be distinguished by the unmodified male cheliceral fang (Fig. 4H, I) (vs the large cockscomb-shaped sclerotized process (Fig. 1H–J) in *I. cristiformis* sp. nov. and the tongue-shaped sclerotized process (Fig. 17H–J) in *I. xiaolongha* sp. nov.), the narrow leaf-shaped retrolateral lobe of the male palp (Fig. 5F) (vs broad rectangular-shaped (Fig. 2F) in *I. cristiformis* sp. nov. and broad leaf-shaped (Fig. 18F) in *I. xiaolongha* sp. nov.). The female differs from *I. cristiformis* and *I. xiaolongha* by the small rectangular-shaped atrium (Fig. 6F) (vs the large bowl-shaped atrium (Fig. 3H) in *I. cristiformis* sp. nov. and small bell-shaped atrium (Fig. 19H) in *I. xiaolongha* sp. nov.).

**Description. Male (holotype).** **Body:** habitus as in Fig. 4A–C; body length 1.52. **Carapace:** 0.81 long, 0.61 wide; yellow, with egg-shaped patches behind eyes, surface of elevated portion of pars cephalica smooth, sides finely reticulate, lateral margin straight, smooth (Fig. 4D, E). **Clypeus:** height about 1.3 times ALE diameter (Fig. 4G). **Eyes:** see Fig. 4D, G. **Sternum:** pale orange (Fig. 4F). **Mouthparts:** chelicerae, endites and labium orange; chelicerae straight, base of fangs unmodified, fang groove with a few small denticles (Figs 4H, I, 22C, D); anteromedian tip of endites with one strong, tooth-like projection (Fig. 4F). **Abdomen:** 0.65 long, 0.49 wide; dorsal scutum well sclerotized, pale orange, covering 1/3 of the abdomen width and approximately 1/2 of the abdomen length, not fused to epigastric scutum; epigastric and postgastric scutum well sclerotized, pale orange, fused, postgastric scutum covering about 1/2 of the abdomen length (Fig. 4A–C). **Legs:** pale orange, femur I with 2 prolateral spines, tibia I with 4 pairs, metatarsus I with 2 pairs of long ventral spines. Legs II lost. Legs III and IV spineless. **Pulp:** trochanter with ventral projection, cymbium brown; bulb with 2 ventral protuberances, one large and another very small, distal end of bulb stout, with numerous lamella-like membranes, retrolateral lobe narrow leaf-shaped (Figs 5, 20D–F).

**Female (paratype, SYNU-386).** Same as male except as noted. **Body:** body length 1.93. **Carapace:** 0.80 long, 0.64 wide. **Mouthparts:** chelicerae and endites unmodified. **Abdomen:** 1.20 long, 0.81 wide; dorsal scutum very small. **Epigastric area:** the postgastric scutum with a strongly sclerotized structure in the middle (Fig. 6F). **Endogyne:** from the middle of the slightly thickened margin of the postgastric scutum runs a dark, simple, winding tube posteriorly, ending in a small rectangular shaped atrium (Fig. 23C, D).

**Etymology.** The specific name is a noun in apposition taken from the type locality.

**Distribution.** Known only from the type locality.
Figure 4. *Ischnothyreus* mangun sp. nov., male holotype A–C habitus, dorsal, lateral and ventral views D–G prosoma, dorsal, lateral, ventral and anterior views H, I left chelicerae, anterior and posterior views. Abbreviation: stp = strong, tooth-like projection. Scale bars: 0.4 mm (A–G); 0.1 mm (H, I).

Type material. Holotype ♂: China, Yunnan, Jinghong City, Mengyang Town, Xishuangbanna Natural Reserve, monsoon forest; 21°24.161’N, 101°36.412’E; 791 m; 16.VI.2013; Q. Zhao and Z. Chen leg. (SYNU-387). Paratypes 5 ♂ 12 ♀: same data as for holotype (SYNU-388–404).

Diagnosis. The new species is similar to I. taunggyi Tong & Li, 2020 in the male palp and the large, sclerotized process of male cheliceral fang, but can be distinguished...
by the broad retrolateral lobe of male palp (Fig. 8F) (vs small, ear-shaped retrolateral lobe in I. taunggyi; Tong et al. 2020: fig. 9F) and by the long abdominal dorsal scutum of the female (5/6 of the abdomen length (Fig. 9A) vs less than 1/2 of the abdomen length in I. taunggyi; Tong et al. 2020: fig. 10A).

Description. Male (holotype). Body: habitus as in Fig. 7A–C; body length 1.86. Carapace: 0.95 long, 0.78 wide; pale brown, with egg-shaped patches behind eyes, surface of elevated portion of pars cephalica smooth, sides finely reticulate, lateral margin straight, smooth (Fig. 7D, E). Clypeus: height about 0.74 times ALE diameter (Fig. 7G). Eyes: see Fig. 7D, G. Sternum: pale orange (Fig. 7F). Mouth-

...ing approximately 2/3 of the abdomen width and 3/4 of the abdomen length, fused to epigastric scutum; epigastric and postgastric scutum well sclerotized, pale orange, fused, postgastric scutum covering about 3/4 of the abdomen length (Fig. 13A–C). Legs: pale orange, femur I with 2 prolateral spines, tibia I with 4 pairs, metatarsus I with 2 pairs of long ventral spines. Leg II spination similar to leg I except femur with only 1 prolateral spine. Legs III and IV spineless. Palp: trochanter with ventral projection, cymbium brown; bulb with one very small ventral protuberance, distal end of bulb elongated, with distal narrow membrane, and a retrolateral tuber-like projection (Figs 14, 20M–O).
Figure 15. *Ischnothyreus qiuixing*, female (SYNU-378) A–C habitus, dorsal, lateral and ventral views D–G prosoma, dorsal, lateral, ventral and anterior views H epigastric region, ventral view. Scale bars: 0.4 mm (A–G); 0.2 mm (H).
Female (redescription, SYNU-378). Same as male except as noted. **Body**: habitus as in Fig. 15A–C; body length 1.82. **Carapace**: 0.81 long, 0.66 wide. **Mouthparts**: chelicerae and endites unmodified. **Abdomen**: 1.24 long, 0.79 wide, dorsal scutum very small. **Epigastric area**: surface without external features (Fig. 15H). **Endogyne**: from the middle of the slightly thickened margin of the postgastric scutum runs a dark, simple winding tube posteriorly, ending in a circular atrium (Fig. 23I, J).

**Distribution.** China, Myanmar.

*Ischnothyreus sijiae* Tong & Li, sp. nov.  
http://zoobank.org/CD66D79E-1F25-4A40-8BF7-F1172AA82CDE  
Figures 16, 24A, B

**Type material.**  
**Holotype** ♀: China, Yunnan, Xishuangbanna Tropical Garden; 21°54.999′N, 101°16.237′E; 561 m; 24.IV.2019; Y. Tong and J. Liu leg. (SYNU-426). **Paratype.** 1 ♀: same data as for holotype (SYNU-427).

**Diagnosis.** The new species is similar to *I. tadfane* Tong & Li, 2013 in the large dorsal scutum of the abdomen, but can be distinguished by the greater short winding tube of the endogyne (Fig. 24B) (vs long winding tube; Tong and Li 2013: fig. 4I, K) and the nipple-shaped atrium (Fig. 24A) (vs inverted bell shaped atrium; Tong and Li 2013: fig. 4H, J).

**Description. Female (holotype).**  
**Body**: habitus as in Fig. 16A–C; body length 1.49. **Carapace**: 0.68 long, 0.54 wide; yellow-brown, without any pattern, surface finely reticulate, lateral margin straight, smooth (Fig. 16D, E). **Clypeus**: height about 0.8 times ALE diameter (Fig. 16G). **Eyes**: see Fig. 16D, G. **Sternum**: pale orange (Fig. 16F). **Mouthparts**: chelicerae, endites and labium orange; chelicerae straight, base of fangs unmodified (Fig. 16G); endites unmodified (Fig. 16F). **Abdomen**: 0.86 long, 0.53 wide; dorsal scutum well sclerotized, brown, covering 2/3 of the abdomen width and approximately 4/5 of the abdomen length, not fused to epigastric scutum; epigastric and postgastric scutum well sclerotized, pale orange, unfused (Fig. 16A–C). **Legs**: pale orange, femur I with 2 prolateral spines, tibia I with 4 pairs, metatarsus I with 2 pairs of long ventral spines. Leg II spination similar to leg I except femur with only 1 prolateral spine. Legs III and IV spineless. **Epigastric area**: surface without external features (Fig. 16H). **Endogyne**: from the middle of the slightly thickened margin of the postgastric scutum runs a dark, simple winding tube, ending in a small nipple-shaped atrium (Fig. 24A, B).

**Male.** Unknown.

**Etymology.** The species is named after Miss Sijia Liu, one of the collectors of the holotype.

**Comment.** Among the known species of the genus *Ischnothyreus* of China, *I. qianlongae* Tong & Li, 2008 and *I. tergemintus* Liu, Xu & Henrard, 2019 are known only from males. *I. sijiae* sp. nov. can be distinguished from *I. tergemintus* by the brown colour on the abdomen and sides of carapace (vs yellow abdomen and carapace in
Figure 16. Ischnothyreus sijiae sp. nov., female paratype A–C habitus, dorsal, lateral and ventral views D–G prosoma, dorsal, lateral, ventral and anterior views H epigastric region, ventral view. Scale bars: 0.4 mm (A–G); 0.2 mm (H).
Figure 17. *Ischnothyreus xiaolongha* sp. nov., male holotype A–C habitus, dorsal, lateral and ventral views D–G prosoma, dorsal, lateral, ventral and anterior views H–J left chelicerae, anterior, posterior and lateral views. Abbreviation: stp = strong, tooth-like projection. Scale bars: 0.4 mm (A–G); 0.1 mm (H–J).

Abbreviations: llm = lamella-like membrane; nsm = needle-shaped membrane; rl = retrolateral lobe; rol = round lobe; vpr = ventral protrusion.
Figure 19. *Ischnothyreus xiaolongha* sp. nov., female paratype A–C habitus, dorsal, lateral and ventral views D–G prosoma, dorsal, lateral, ventral and anterior views H epigastric region, ventral view. Scale bars: 0.4 mm (A–H).
Figure 20. *Ischnothyreus* spp., left male palp **A–C** *I. cristiformis* sp. nov. **D–F** *I. mangun* sp. nov. **G–I** *I. mengyang* sp. nov. **J–L** *I. qidaoban* sp. nov. **M–O** *I. qixing* A, D, G, J, M prolateral view B, E, H, K, N dorsal view C, F, I, L, O retrolateral view. Scale bars: 0.1 mm (**A–F, M–O**); 0.2 mm (**G–L**).

21°24.832’N, 101°37.906’E; 721 m; 18.VI.2013; Q. Zhao and Z. Chen leg. (SYNU-428). **Paratypes** 1♀: same data as for holotype (SYNU-429); 1♂3♀: same data as for holotype; 21°24.253’N, 101°36.324’E; 761 m; 15.VI.2013; Q. Zhao and Z. Chen leg. (SYNU-430–433).

**Diagnosis.** The new species is similar to *I. cristiformis* sp. nov. and *I. mangun* sp. nov. in the lamella-like membrane of the male palp and the short dorsal scutum of the abdo-
men, but can be distinguished by the tongue-shaped sclerotized process (Fig. 17H–J) of the cheliceral fang (vs large cockscomb-shaped sclerotized process (Fig. 1H–J) in *I. cristiformis* sp. nov. and the unmodified male cheliceral fang (Fig. 4H, I) in *I. mangun* sp. nov.), the broad leaf-shaped retrolateral lobe of the male palp (Fig. 18F) (vs broad rectangular-shaped (Fig. 2F) in *I. cristiformis* sp. nov. and narrow leaf-shaped (Fig. 5F) in *I. mangun* sp. nov.) and the small bell-shaped atrium (Fig. 19H) of the female (vs the large bowl-shaped atrium (Fig. 3H) in *I. cristiformis* sp. nov. and the small rectangular shaped atrium (Fig. 6F) in *I. mangun* sp. nov.).

Figure 21. A–E *I. xiaolongha* sp. nov. F, G *I. qixing* A left male palp, prolateral view B left male palp, dorsal view C left male palp, retrolateral view D, F left male chelicerae, anterior view E, G left male chelicerae, posterior view. Abbreviations: fsp = finger-shaped process; tsp = tongue-shaped process. Scale bars: 0.2 mm (A–C).
Ischnothyreus from Xishuangbanna, China (Araneae, Oonopidae)

Figure 22. Ischnothyreus spp., left male chelicerae

A, B I. cristiformis sp. nov. C, D I. mangun sp. nov. E, F I. mengyang sp. nov. G, H I. qidaoban sp. nov. A, C, E, G anterior view B, D, F, H posterior view. Abbreviations: ccp = cockscomb-shaped process; hsp = helmet-shaped process; lsp = large, sclerotized process.
Figure 23. Endogyne of *Ischnothyreus* spp., A, B *I. cristiformis* sp. nov. C, D *I. mangun* sp. nov. E, F *I. mengyang* sp. nov. G, H *I. qidaoban* sp. nov. I, J *I. qiu* sp. nov. ventral view B, D, F, H, J dorsal view. Abbreviations: a = apodemes; bsa = bell-shaped atrium; cd = central oval depression; csa = circular atrium; nsa = nipple-shaped atrium; oa = opening of the atrium; rsa = rectangular-shaped atrium; wt = winding tube. Scale bars: 0.2 mm.
Description. Male (holotype). Body: habitus as in Fig. 17A–C; body length 1.48. Carapace: 0.80 long, 0.61 wide; yellow, with egg-shaped patches behind eyes, surface of elevated portion of pars cephalica smooth, sides finely reticulate, fovea absent, lateral margin straight, smooth (Fig. 17D, E). Clypeus: height about equal to ALE diameter (Fig. 17G). Eyes: see Fig. 17D, G. Sternum: pale orange (Fig. 17F). Mouthparts: chelicerae, endites and labium orange; chelicerae straight, base of fangs with tongue-shaped sclerotized process, fang groove with a few small denticles (Figs 17H–J, 21D, E); anteromedian tip of endites with one strong, tooth-like projection (Fig. 17F). Abdomen: 0.64 long, 0.48 wide; dorsal scutum pale orange, very small, covering approximately 1/4 of the abdomen width and 1/3 of the abdomen length, not fused to epigastric scutum; epigastric and postgastric scutum well sclerotized, pale orange, fused, postgastric scutum covering about 1/2 of the abdomen length (Fig. 17A–C). Legs: pale orange, femur I with 2 prolateral spines, tibia I with 4 pairs, metatarsus I with 2 pairs of long ventral spines. Leg II spination similar to leg I except femur with only 1 prolateral spine. Legs III and IV spineless. Palp: trochanter with ventral projection, cymbium brown; bulb with 2 ventral protuberances, one large and another very small, distal end of bulb stout, with one narrow needle-shaped prolateral projection and a lamella-like membrane, retrolateral lobe broad leaf-shaped (Figs 18, 21A–C).

Female (paratype, SYNU-429). Same as male except as noted. Body: habitus as in Fig. 19A–C; body length 1.70. Carapace: 0.76 long, 0.63 wide. Mouthparts: chelicerae and endites unmodified. Abdomen: 0.95 long, 0.64 wide. Epigastric area:
surface without external features (Fig. 19H). **Endogyne:** from the middle of the slightly thickened margin of the postgastric scutum runs a dark, simple winding tube posteriorly, ending in a small bell-shaped atrium (Fig. 24C, D).

**Etymology.** The specific name is a noun in apposition taken from the type locality.

**Distribution.** Known only from the type locality.

**Acknowledgements**

The manuscript benefitted greatly from comments by Yuri Marusik (Magadan, Russia) and Yvonne Kranz-Baltensperger (Bern, Switzerland). Sarah Crews (San Francisco, USA) revised the English. This study was supported by the National Natural Science Foundation of China (31750002, 31972867, 31672260) and the Program for Liaoning Innovation Talents in University.
