Dualities between Elzaki Transform and Some Useful Integral Transforms

Sudhanshu Aggarwal, Kavita Bhatnagar, Arti Dua

Abstract: Integral transforms have wide applications in the various disciplines of engineering and science to solve the problems of heat transfer, springs, mixing problems, electrical networks, bending of beams, carbon dating problems, Newton’s second law of motion, signal processing, exponential growth and decay problems. In this paper, we will discuss the dualities between Elzaki transform and some useful integral transforms namely Laplace transform, Kamal transform, Aboodh transform, Sumudu transform, Mahgoub (Laplace-Carson) transform, Mohand transform and Sawi transform. To visualize the importance of dualities between Elzaki transform and mention integral transforms, we give tabular presentation of the integral transforms (Laplace transform, Kamal transform, Aboodh transform, Sumudu transform, Mahgoub transform, Mohand transform and Sawi transform) of mostly used basic functions by using mention dualities relations. Results show that the mention integral transforms are strongly related with Elzaki transform.

Keywords: Laplace; Kamal; Aboodh; Sumudu; Mahgoub (Laplace-Carson); Mohand; Sawi; Elzaki transforms.

AMS Subject Classification 2010: 44A05, 44A10, 44A15.

I. INTRODUCTION

Many process and phenomenon of science, engineering and real life can be expressed mathematically and solved by using integral transforms. The problems arise in the field of signal processing, statistics, thermal science, medicine, fractional calculus, aerodynamics, civil engineering, control theory, cardiology, quantum mechanics, space science, marine science, biology, gravitation, nuclear magnetic resonance, heat conduction, economics, telecommunications, nuclear reactors, detection of diabetes, chemistry, stress analysis, electricity, physics, potential theory, mathematics, deflection of beams, vibration of plates, defense, Brownian motion and many other fields can be easily handle with the help of integral transforms by converting them into mathematical form. In the advanced time, researchers are interested in solving the advance problems of research, science, space, engineering and real life by introducing new integral transforms. Aggarwal and Chaudhary [1] discussed Mohand and Laplace transforms comparatively by solving system of differential equations using both integral transforms.

Recently many scholars [2-6, 8] used different integral transforms namely Kamal transform, Aboodh transform, Sumudu transform, Mahgoub (Laplace-Carson) transform, Mohand transform and Elzaki transform for evaluating improper integrals which contains error function in the integrand. Mahgoub [7] gave Sawi transform which is a new integral transform. Singh and Aggarwal [9] used Sawi transform and solved the problems of growth and decay.

The aim of this study is to establish duality relations between Elzaki transform and some useful integral transforms namely Laplace transform, Kamal transform, Aboodh transform, Sumudu transform, Mahgoub (Laplace-Carson) transform, Mohand transform and Sawi transform.

II. LAPLACE TRANSFORM

The Laplace transform of the function $Z(\gamma), \gamma \geq 0$ is given by [1]

$$L[Z(\gamma)] = \int_{0}^{\infty} Z(\gamma)e^{-\gamma} d\gamma = B(\epsilon)$$

(1)

III. KAMAL TRANSFORM

Kamal transform of the function $Z(\gamma), \gamma \geq 0$ is given by [2]

$$K[Z(\gamma)] = \int_{0}^{\infty} Z(\gamma)e^{-\gamma} d\gamma = C(\epsilon), \quad 0 < k_1 \leq \epsilon \leq k_2$$

(2)

IV. ABOOEDH TRANSFORM

Aboodh transform of the function $Z(\gamma), \gamma \geq 0$ is given by [3]

$$A[Z(\gamma)] = \frac{1}{\epsilon} \int_{0}^{\epsilon} Z(\gamma)e^{-\gamma} d\gamma = D(\epsilon), \quad 0 < k_1 \leq \epsilon \leq k_2$$

(3)

V. SUMUDU TRANSFORM

Sumudu transform of the function $Z(\gamma), \gamma \geq 0$ is given by [4]

$$S[Z(\gamma)] = \int_{0}^{\epsilon} Z(\epsilon)e^{-\gamma} d\gamma = F(\epsilon), \quad 0 < k_1 \leq \epsilon \leq k_2$$

(4)

VI. MAHGOUB (LAPLACE–CARSON) TRANSFORM

Mahgoub (Laplace-Carson) transform of the function $Z(\gamma), \gamma \geq 0$ is given by [5]

$$M[Z(\gamma)] = \epsilon \int_{0}^{\epsilon} Z(\gamma)e^{-\gamma} d\gamma = G(\epsilon), \quad 0 < k_1 \leq \epsilon \leq k_2$$

(5)

VII. MOHAND TRANSFORM

Mohand transform of the function $Z(\gamma), \gamma \geq 0$ is given by [1, 6]

$$M[Z(\gamma)] = \epsilon^2 \int_{0}^{\epsilon} Z(\gamma)e^{-\gamma} d\gamma = H(\epsilon)$$

(6)
\[
0 < k_1 \leq \epsilon \leq k_2
\]

**VIII. SAWI TRANSFORM**

Sawi transform of the function \( Z(\gamma), \gamma \geq 0 \) is given by [7, 9]
\[
S^\prime(Z(\gamma)) = \frac{1}{\epsilon} \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma = I(\epsilon),
\]
\[
0 < k_1 \leq \epsilon \leq k_2
\]

**IX. ELZAKI TRANSFORM**

Elzaki transform of the function \( Z(\gamma), \gamma \geq 0 \) is given by [8]
\[
E\{Z(\gamma)\} = \epsilon \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma = J(\epsilon),
\]
\[
0 < k_1 \leq \epsilon \leq k_2
\]

**X. DUALITIES OF ELZAKI TRANSFORM WITH SOME USEFUL INTEGRAL TRANSFORMS**

In this section, we define the dualities between Elzaki transform and some useful integral transforms namely Laplace transform, Kamal transform, Aboodh transform, Sumudu transform, Mahgoub (Laplace–Carson) transform, Mohand transform and Sawi transform.

**A. Elzaki–Laplace Duality**

If Elzaki and Laplace transforms of \( Z(\gamma) \) are \( J(\epsilon) \) and \( B(\epsilon) \) respectively then
\[
J(\epsilon) = \epsilon B\left(\frac{1}{\epsilon}\right)
\]
and \( B(\epsilon) = \epsilon J\left(\frac{1}{\epsilon}\right) \)

**Proof:** From (8),
\[
J(\epsilon) = \epsilon \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma
\]
Now, using (1) in above Equation, we obtain
\[
J(\epsilon) = \epsilon B\left(\frac{1}{\epsilon}\right).
\]
To drive (10), we use (1)
\[
B(\epsilon) = \int_0^\infty Z(\gamma)e^{-\gamma}d\gamma
\]
\[
= \epsilon \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma
\]
It is immediately concluded using (8) in (11),
\[
B(\epsilon) = \epsilon J\left(\frac{1}{\epsilon}\right).
\]

**B. Elzaki–Kamal Duality**

If Elzaki and Kamal transforms of \( Z(\gamma) \) are \( J(\epsilon) \) and \( C(\epsilon) \) respectively then
\[
J(\epsilon) = \epsilon C(\epsilon)
\]
and \( C(\epsilon) = \frac{1}{\epsilon} J(\epsilon) \)

**Proof:** Using (8) follows
\[
J(\epsilon) = \epsilon \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma
\]
Now, using (2) in above equation, we obtain
\[
J(\epsilon) = \epsilon C(\epsilon).
\]
To drive (13), we use (2)
\[
C(\epsilon) = \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma
\]
\[
= \frac{1}{\epsilon} \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma
\]
It is immediately concluded using (8) in above equation,
\[
C(\epsilon) = \frac{1}{\epsilon} J(\epsilon).
\]

**C. Elzaki–Aboodh Duality**

If Elzaki and Aboodh transforms of \( Z(\gamma) \) are \( J(\epsilon) \) and \( D(\epsilon) \) respectively then
\[
J(\epsilon) = D\left(\frac{1}{\epsilon}\right)
\]
and \( D(\epsilon) = J\left(\frac{1}{\epsilon}\right) \)

**Proof:** It is immediately concluded from (8)
\[
J(\epsilon) = \epsilon \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma
\]
Now, using (3) in above Equation, we have
\[
J(\epsilon) = D\left(\frac{1}{\epsilon}\right).
\]
To drive (16), we use (3)
\[
D(\epsilon) = \frac{1}{\epsilon} \int_0^\infty Z(\gamma)e^{-\epsilon\gamma}d\gamma
\]
It is immediately concluded using (8) in above equation,
\[
D(\epsilon) = J\left(\frac{1}{\epsilon}\right).
\]

**D. Elzaki–Sumudu Duality**

If Elzaki and Sumudu transforms of \( Z(\gamma) \) are \( J(\epsilon) \) and \( F(\epsilon) \) respectively then
\[
J(\epsilon) = \epsilon \frac{\epsilon}{\epsilon^2} F(\epsilon)
\]
and \( F(\epsilon) = \frac{\epsilon}{\epsilon^2} J(\epsilon) \)

**Proof:** From (8), we have
\[
J(\epsilon) = \epsilon \int_0^\infty Z(\gamma)e^{-\frac{\gamma}{\epsilon}}d\gamma
\]
Put \( \frac{1}{\epsilon} = u \Rightarrow dy = \epsilon du \) in above equation, we have
\[
J(\epsilon) = \epsilon \int_0^\infty Z(\epsilon u) e^{-\epsilon^2 u^2}d\epsilon u
\]
\[
= \epsilon^2 \epsilon \int_0^\infty Z(\epsilon u)e^{-\epsilon \gamma}d\gamma
\]
Now, using (4) in above equation, we have
\[
F(\epsilon) = \epsilon \frac{\epsilon}{\epsilon^2} J(\epsilon).
\]
To drive (18), we use (4)
\[
F(\epsilon) = \int_0^\infty Z(\epsilon y)e^{-\epsilon y}d\epsilon y
\]
Put \( \frac{\epsilon y}{\epsilon} = u \Rightarrow du = \epsilon^{-1} d\epsilon \) in above equation, we have
\[
F(\epsilon) = \epsilon \int_0^\infty Z(\epsilon u)e^{-\epsilon^2 u^2}d\epsilon u
\]
\[
= \epsilon^2 \epsilon \int_0^\infty Z(\epsilon u)e^{-\epsilon \gamma}d\epsilon u
\]
It is immediately concluded using (8) in above equation,
\[
F(\epsilon) = \frac{1}{\epsilon^2} J(\epsilon).
\]

**E. Elzaki–Mahgoub (Laplace–Carson) Duality**

If Elzaki and Mahgoub transforms of \( Z(\gamma) \) are \( J(\epsilon) \) and \( G(\epsilon) \) respectively then
\[
J(\epsilon) = \epsilon \frac{\epsilon}{\epsilon^2} G\left(\frac{1}{\epsilon}\right)
\]
and \( G(e) = \epsilon^2 f \left( \frac{1}{\epsilon} \right) \) 

**Proof:** From (8), we have

\[
J(e) = \epsilon \int_0^\infty Z(y)e^{-\epsilon y} dy
\]

\[
\Rightarrow J(e) = \epsilon^2 \left[ \frac{1}{\epsilon} \int_0^\infty Z(y)e^{-\epsilon y} dy \right]
\]

Now, using (5) in above equation, we have

\[
j(e) = \epsilon^2 G \left( \frac{1}{\epsilon} \right).
\]

To drive (20), we use (5)

\[
G(e) = \epsilon \int_0^\infty Z(y)e^{-\epsilon y} dy
\]

\[
G(e) = \epsilon^2 \left[ \frac{1}{\epsilon} \int_0^\infty Z(y)e^{-\epsilon y} dy \right]
\]

It is immediately concluded using (8) in above equation,

\[
g(e) = \epsilon^2 f \left( \frac{1}{\epsilon} \right).
\]

**F. Elzaki – Mohand Duality**

If Elzaki and Mohand transforms of \( Z(y) \) are \( J(e) \) and \( H(e) \) respectively then

\[
J(e) = \epsilon^3 H \left( \frac{1}{\epsilon} \right)
\]

and \( H(e) = \epsilon^3 f \left( \frac{1}{\epsilon} \right) \)

**Proof:** From (8), we have

\[
J(e) = \epsilon \int_0^\infty Z(y)e^{-\epsilon y} dy
\]

\[
\Rightarrow J(e) = \epsilon^3 \left[ \frac{1}{\epsilon^2} \int_0^\infty Z(y)e^{-\epsilon y} dy \right]
\]

Now, using (6) in above equation, we have

\[
j(e) = \epsilon^3 H \left( \frac{1}{\epsilon} \right).
\]

To drive (22), we use (6)

\[
H(e) = \epsilon^2 \int_0^\infty Z(y)e^{-\epsilon y} dy
\]

\[
\Rightarrow H(e) = \epsilon^3 \left[ \frac{1}{\epsilon} \int_0^\infty Z(y)e^{-\epsilon y} dy \right]
\]

It is immediately concluded using (8) in above equation,

\[
H(e) = \epsilon^3 f \left( \frac{1}{\epsilon} \right).
\]

**XI. APPLICATIONS OF MENTION DUALITY RELATIONS FOR FINDING INTEGRAL TRANSFORMS (LAPLACE TRANSFORM, KAMAL TRANSFORM, ABOODH TRANSFORM, SUMUDU TRANSFORM, MAHGOUB TRANSFORM, MOHAND TRANSFORM AND SAWI TRANSFORM) OF USEFUL BASIC FUNCTIONS**

We are giving tabular presentation of the integral transforms of mostly used basic functions by using mention dualities relations to visualize the usefulness of dualities between Elzaki transform and mention integral transforms in the application field.

| Table-I: Laplace transform of useful basic functions with the help of Elzaki – Laplace duality relation |
|---|---|---|---|
| S.N. | \( Z(y) \) | \( E(Z(y)) = f(e) \) | \( L[Z(y)] = B(e) \) |
| 1. | \( 1 \) | \( \epsilon^2 \) | \( \frac{1}{\epsilon} \) |
| 2. | \( y \) | \( \epsilon^3 \) | \( \frac{1}{\epsilon^2} \) |
| 3. | \( y^2 \) | \( 2! \epsilon^4 \) | \( \frac{2!}{\epsilon^3} \) |
| 4. | \( y^n, n \in N \) | \( n! \epsilon^{n+2} \) | \( \frac{n!}{\epsilon^{n+1}} \) |
| 5. | \( y^n, n > -1 \) | \( \Gamma(n+1) \epsilon^{n+2} \) | \( \frac{\Gamma(n+1)}{\epsilon^{n+1}} \) |
| 6. | \( a^y \) | \( \frac{\epsilon^2}{1 - a \epsilon} \) | \( \frac{1}{\epsilon - a} \) |
| 7. | \( \sin ay \) | \( a \epsilon^3 (1 + a^2 \epsilon^2) \) | \( \frac{a}{\epsilon^2 + a^2} \) |
| 8. | \( \cos ay \) | \( \epsilon^2 (1 + a^2 \epsilon^2) \) | \( \frac{\epsilon}{\epsilon^2 + a^2} \) |
## Table-II: Kamal transform of useful basic functions with the help of Elzaki – Kamal duality relation

| S.N. | \( Z(\gamma) \) | \( E[Z(\gamma)] = J(\epsilon) \) | \( K[Z(\gamma)] = C(\epsilon) \) |
|------|-----------------|-----------------|-----------------|
| 1.   | 1               | \( \epsilon^2 \) | \( \epsilon \)   |
| 2.   | \( \gamma \)   | \( \epsilon^3 \) | \( \epsilon^2 \) |
| 3.   | \( \gamma^2 \) | \( 2! \epsilon^4 \) | \( 2! \epsilon^3 \) |
| 4.   | \( \gamma^n, \ n \in N \) | \( n! \epsilon^{n+2} \) | \( n! \epsilon^{n+1} \) |
| 5.   | \( \gamma^n, \ n > -1 \) | \( \Gamma(n + 1) \epsilon^{n+2} \) | \( \Gamma(n + 1) \epsilon^{n+1} \) |
| 6.   | \( e^{\alpha \gamma} \) | \( \frac{\epsilon^2}{1 - \alpha \epsilon} \) | \( \frac{\epsilon}{1 - \alpha \epsilon} \) |
| 7.   | \( \sin\gamma \) | \( \frac{a \epsilon^3}{1 - a^2 \epsilon^2} \) | \( \frac{a}{\epsilon^2 - a^2} \) |
| 8.   | \( \cos\gamma \) | \( \frac{\epsilon^2}{1 + a^2 \epsilon^2} \) | \( \frac{\epsilon}{1 + a^2 \epsilon^2} \) |
| 9.   | \( \sinh\gamma \) | \( \frac{a \epsilon^3}{1 - a^2 \epsilon^2} \) | \( \frac{a}{\epsilon^2 - a^2} \) |
| 10.  | \( \cosh\gamma \) | \( \frac{\epsilon^2}{1 - a^2 \epsilon^2} \) | \( \frac{\epsilon}{1 - a^2 \epsilon^2} \) |

## Table-III: Aboodh transform of useful basic functions with the help of Elzaki – Aboodh duality relation

| S.N. | \( Z(\gamma) \) | \( E[Z(\gamma)] = J(\epsilon) \) | \( A[Z(\gamma)] = D(\epsilon) \) |
|------|-----------------|-----------------|-----------------|
| 1.   | 1               | \( \epsilon^2 \) | \( \frac{1}{\epsilon^2} \) |
| 2.   | \( \gamma \)   | \( \epsilon^3 \) | \( \frac{1}{\epsilon^3} \) |
| 3.   | \( \gamma^2 \) | \( 2! \epsilon^4 \) | \( 2! \epsilon^3 \) |
| 4.   | \( \gamma^n, n \in N \) | \( n! \epsilon^{n+2} \) | \( n! \epsilon^{n+2} \) |
| 5.   | \( \gamma^n, n > -1 \) | \( \Gamma(n + 1) \epsilon^{n+2} \) | \( \frac{\Gamma(n + 1)}{\epsilon^{n+2}} \) |
| 6.   | \( e^{\alpha \gamma} \) | \( \frac{\epsilon^2}{1 - \alpha \epsilon} \) | \( \frac{1}{\epsilon(\epsilon - a)} \) |
| 7.   | \( \sin\gamma \) | \( \frac{a \epsilon^3}{1 + a^2 \epsilon^2} \) | \( \frac{a}{\epsilon^2 + a^2} \) |
Table-IV: Sumudu transform of useful basic functions with the help of Elzaki – Sumudu duality relation

| S.N. | \( Z(\gamma) \) | \( E[Z(\gamma)] = f(\epsilon) \) | \( S[Z(\gamma)] = F(\epsilon) \) |
|------|-----------------|-----------------|-----------------|
| 1.   | 1               | \( \epsilon^2 \) | 1               |
| 2.   | \( \gamma \)    | \( \epsilon^3 \) | \( \epsilon \)  |
| 3.   | \( \gamma^2 \)  | \( 2! \epsilon^4 \) | \( 2! \epsilon^2 \) |
| 4.   | \( \gamma^n, n \in N \) | \( n! \epsilon^{n+2} \) | \( n! \epsilon^n \) |
| 5.   | \( \gamma^n, n > -1 \) | \( \Gamma(n + 1)\epsilon^{n+2} \) | \( \Gamma(n + 1)\epsilon^n \) |
| 6.   | \( e^{\alpha \gamma} \) | \( \frac{\epsilon^2}{(1 - \alpha \epsilon)} \) | \( \frac{1}{(1 - \alpha \epsilon)} \) |
| 7.   | \( \sinh \gamma \) | \( \frac{a \epsilon^3}{(1 + a^2 \epsilon^2)} \) | \( \frac{a \epsilon}{(1 + a^2 \epsilon^2)} \) |
| 8.   | \( \cosh \gamma \) | \( \frac{\epsilon^2}{(1 + a^2 \epsilon^2)} \) | \( \frac{1}{(1 + a^2 \epsilon^2)} \) |
| 9.   | \( \sinh \gamma \) | \( \frac{a \epsilon^3}{(1 - a^2 \epsilon^2)} \) | \( \frac{a \epsilon}{(1 - a^2 \epsilon^2)} \) |
| 10.  | \( \cosh \gamma \) | \( \frac{\epsilon^2}{(1 - a^2 \epsilon^2)} \) | \( \frac{1}{(1 - a^2 \epsilon^2)} \) |

Table-V: Mahgoub (Laplace – Carson) transform of useful basic functions with the help of Elzaki – Mahgoub (Laplace – Carson) duality relation

| S.N. | \( Z(\gamma) \) | \( E[Z(\gamma)] = f(\epsilon) \) | \( M[Z(\gamma)] = G(\epsilon) \) |
|------|-----------------|-----------------|-----------------|
| 1.   | 1               | \( \epsilon^2 \) | 1               |
| 2.   | \( \gamma \)    | \( \epsilon^3 \) | \( \frac{1}{\epsilon} \) |

| 10. | $cosh\alpha$ | $e^2$ | $\frac{1}{e(1-a^2\epsilon^2)}$ |

**XII. CONCLUSIONS**

In the present paper, duality relations between Elzaki transform and some useful integral transforms namely Laplace transform, Kamel transform, Aboodh transform, Sumudu transform, Mahgoub (Laplace-Carson) transform, Mohand transform and Sawi transform are established successfully. Tabular presentation of the integral transforms (Laplace transform, Kamel transform, Aboodh transform, Sumudu transform, Mahgoub (Laplace-Carson) transform, Mohand transform and Sawi transform) of mostly used basic functions are given with the help of mention dualities to visualize the importance of dualities between Elzaki transform and mention integral transforms. Results show that the Elzaki transform and mention integral transforms in this paper are strongly related to each others. In future using these duality relations, we can easily solved many advanced problems of modern era such as motion of coupled harmonic oscillators, drug distribution in the body, arms race models, Brownian motion and the common health problem such as detection of diabetes.

**AUTHORS PROFILE**

Dr. Sudhanbh Aggarwal has received his Ph.D. degree from C.C.S. University, Meerut in 2019. He has also qualified CSIR NET examination (June 2010, June-2012, June-2013, June-2014 and June-2015) in Mathematical Sciences. He is working as an Assistant Professor in National P.G. College Barthalganj, Gorakhpur. He is equipped with an extraordinary caliber and appreciable academic potency. His fields of interest include Integral Transform Methods, Differential and Partial Differential Equations, Integral Equations, Vibration of Plates, Theory of Elasticity and Number Theory. He has published many research papers in national and international journals.

Dr. Kavita Bhatnagar has been associated with the NIET, Greater Noida for the last three years as a competent, successful and responsible faculty member in Mathematics. She is working as an Assistant Professor in the Department of Applied Sciences there. She is awarded with the degree of Ph.D. by Rajasthan University, Jaipur in 2015. She has published ten research papers in National and International Journals. She has also participated in various workshops. She has around 12 years of teaching experience in the Engineering Colleges.

Dr. Arti Dua is working as an Assistant Professor in Applied Science and Humanities Department at I.T.S. Engineering College, Greater Noida. She has completed her Ph.D. degree from Singhania University, Rajasthan in 2014. She has published many research papers in reputed journals and also a member of different Mathematical Societies. Her fields of interest include Integral Transform Methods and Fluid Mechanics. She has around 13 years of teaching experience in the Engineering Colleges.
