**Development of Community Health Care Networks Utilizing Local Community Centers**

Published On: December 08, 2016 | Pages: 045 - 050

Author(s): Eiichiro Ichiishi*

Objectives: Japan is expected to become the first super-aging society in the world, and the collapse of the Japanese health care system is becoming a real possibility, due to the aging of the society combined with a significant increase in medical expenditure. ...

**A Theory-Based Intervention in Health Visiting Students in Order to Reduce Mental Illness Stigma: A Quasi-Experimental Study**

Published On: September 03, 2016 | Pages: 037 - 043

Author(s): Georgia Koutsouradi*, Christina Dimitrakaki, Eirini Agapidaki, Yannis Tountas and Areti Lagiou

Background: Stigma of mental illness is an important barrier to treatment and recovery of mental illness. Schizophrenia represents the most common mental disorder for the public and it is connected with the highest stigma due to misconceptions of dangerousness. Stigmatizing attitudes have been found not only among general population but also in health care providers. ...

**Indoor Air Pollutants and Respiratory Problems among Dhaka City Dwellers**
Background: Indoor air pollutants becoming a great concern for public health. Indoor air pollution can cause more harmful health impacts than that of outdoor air pollution. Objectives: The study was conducted to investigate some selected indoor air pollutants and respiratory problems among the households of Dhaka city. ...
Background: With implementation of Medicare policies affecting reimbursement for readmissions, there has been increased emphasis on quality of care during transition from hospital to home. Several models for improved care, such as utilization of transition coaches, have developed to address barriers to quality healthcare that are prevalent in this care transition. ...

Role of Dentists in Creating a Tobacco free Society

Published On: September 08, 2016 | Pages: 044 - 044

Author(s): Amit Vanka and Shanthi Vanka*

“Giving up smoking is easy I have done it a thousand times” is an adage that puts in perspective the difficulties in tobacco cessation. Tobacco is a global agent of death [1]. The tobacco epidemic is one of the biggest public health threats the world has ever faced, killing around 6 million people a year. More than 5 million of those deaths are the result of direct to ...
