Supplementary file 1: Evaluability assessment tool for RISE Project in Tanzania

1. Rationale and adequacy of the project
   1) Is there a clear problem statement of the project?
   2) Is there a clear justification of carrying out this project?
   3) Is the project relevant to the government strategies and other stakeholders in MDR-TB?
   4) Are the project goals likely to be achieved?

2. Scope of project, detailing the project components, intentions and beneficiaries, sites, activities taking place in the sites
   1) What is the scope of the project?
   2) What are the project components? / Which activities are implemented in the RISE project?
   3) Is there a theory of change (TOC)?
   4) Are the assumptions in the TOC about the project actions and actors realistic and possible to evaluate?
   5) Who are the beneficiaries of the project?
   6) Are the goals of the project in line with the needs of the beneficiaries?

2. Identifying relevant stakeholders of this project and agreeing on expected outputs of the project. This should also include suggestions on how to sample the stakeholders to participate in the evaluation.

   1) Who initiated this evaluation and why?
   2) Who are the stakeholders of the RISE project?
   3) What are the roles and expectations of the stakeholders in the project?
   4) How do the stakeholders engage in the project?
   5) What is their readiness in terms participation/contribution in the RISE project evaluation?
   6) Are key stakeholders motivated to get involved in the evaluation process, or is there any hesitation or active resistance?

3. Identifying the resources available, such as relevant documents (protocol, SOPs, education materials), M/E tools and datasets;

   1) Which resources are available to facilitate evaluation of the RISE project?
   2) How accessible are the resources?
   3) Are relevant documents available and accessible? Can authors of the intervention be contacted if more information or clarification is needed?
   4) What are existing data sources and are these accessible (e.g., intervention monitoring data, relevant national statistics, data from previous process, outcome or impact evaluations done by others on same/similar interventions)?
5) Do relevant data sources exist?

4. Engaging with stakeholders, to identify their understandings of the intervention detailing also their expectations;

   1) What are the means of engagement of stakeholders in this evaluation?
   2) Are roles and responsibilities for data collection and analysis defined and implemented accordingly?
