Supplementary Figures

**Supplementary Figure 1.** Viability observed under microscopy. A) Viable gametocyte and B) Non-viable gametocytes
**Supplementary Figure 2.** Enrichment methods: (A) Giemsa staining of purified material from Percoll or MACS samples. (B) Initial and enriched gametocytes (Paired Student’s t test statistics; *p < 0.05) and Fold gametocytes enrichment of isolates using the different methods. Each dot represents the isolates (n=6) and bars represents mean (larger) and standard error.
