Table S1. Antimicrobial Activities of Compounds 1–5.

| compounds | S. aureus IC₅₀ (μg/mL) | C. albicans IC₅₀ (μg/mL) |
|-----------|------------------------|---------------------------|
| 1         | NA                     | 67 ± 7                    |
| 2         | NA                     | NA                        |
| 3         | NA                     | NA                        |
| 4         | NA                     | NA                        |
| 5         | NA                     | NA                        |
| Kanamycinᵇ | 2.8 ± 1.1              | NA                        |
| Nystatinᶜ  | 1.4 ± 0.1              | NA                        |

ᵃ NA, considered to have no activity, ᵇ,ᶜ positive controls for antibacterial and antifungal assays, respectively.
Figure S1. *C. albicans* cell density in the presence of compound 1. *p*<0.05. Statistic analysis was carried out by T-test in Excel (Microsoft, Redmond, WA, USA), and values are considered significant if *p*<0.05.
