Supplementary Figure 1:

Western Blot analysis of the JAK-STAT pathway in IFN-τ-sensitive tumor cells HPV 16 postives. BMk-16/myc and SiHa cell lines both HPV 16 transformed were treated with IFN-τ (100 ng/ml) for 15 minutes. Fifty micrograms of proteins of cell lysates were used to examine the protein STAT1, JAK1 and TYK2, and phosphorylated form by Western blot analysis. Actin levels were used, as a control to make sure that equal amount of protein was present in the extracts.
