The following domains were assessed: patient selection (1), ascertainment of exposure (2), ascertainment of outcome (3), alternative cases ruled out (4), length of follow-up (5) and sufficient reporting (6). If patients had less than 3 months follow-up, this domain was judged negative. Records were judged "good" if there were 4 or 6 positive answers within all domains. Records were judged "moderate" if 2 or 3 answers were positive and "poor" if only 1 or no answer were positive.
