Content

Figure S1. The calibration curves used to calibrate the concentrations of NO$_2^-$ and NH$_4^+$ ion by spectrophotometer at 520 nm and 655 nm absorbance spectra, respectively; the fitting curves show a nice linear relation between absorbance and concentration of NO$_2^-$ and NH$_4^+$ ion.

Figure S2. CV curves of N-doped C (N$_2$) and N-doped C (NH$_3$) on OER and HER in 0.05 M H$_2$SO$_4$ (pH 1) electrolyte and 0.1 M NaOH (pH 13) electrolyte.

Figure S3. XRD of N-doped C (N$_2$) and N-doped C (NH$_3$).

Figure S4. SEM micrographs of N-doped C (NH$_3$) (a) and N-doped C (N$_2$) (b).
