Male cohort 1 (years 1984-1986)
1166 men (83.3%)
Age: 54 y

Male cohort 2 (years 1986-1989)
1516 men (82.6%)
Age: 42, 48, 54 or 60 y

Male cohort 2 (years 1986-1989)
1038 men (88.3%)
Age: 46-65 y

Male cohort 2 (years 1986-1989)
854 men (95.0%)
Age: 53-73 y

Female cohort
920 women (78.4%)
Age: 53-73 y

Female cohort
634 women (81.0%)
Age: 53-73 y

Supplemental Figure. The timeline of the Kuopio Ischaemic Heart Disease Risk Factor Study (KIHD). Percentages in brackets indicate the proportion of the eligible participants that participated in the study visits. The red box indicates the examinations that were used for the cross-sectional analyses in the current study.
