Erratum: The combination of the functionalities of feedback circuits is determinant for the attractors’ number and size in pathway-like Boolean networks

Eugenio Azpeitia, Stalin Muñoz, Daniel González-Tokman, Mariana Esther Martinez-Sánchez, Nathan Weinstein, Aurélien Naldi, Elena R. Álvarez-Buylla, David A. Rosenblueth & Luis Mendoza

Scientific Reports 7:42023; doi: 10.1038/srep42023; published online 10 February 2017; updated on 22 March 2017

This Article contains typographical errors.

In the methods section under subheading 'Boolean networks', “In Boolean networks, variables can only take one of two possible values, 0 or 1, and their dynamics is described by

\[ x_i(t + 1) = f_i(x_1(t), \ldots, x_n(t)), \]  

(1)

where \( x_i(t + 1) \) represents the value of variable \( i \) at the time \( t+1 \) as a Boolean function \( f_i \) of its \( n \) regulators \( x_1(t), \ldots, x_n(t) \) at the current time”.

should read:

“In Boolean networks, variables can only take one of two possible values, 0 or 1, and their dynamics is described by

\[ x_i(t + 1) = f_i(x_1(t), \ldots, x_n(t)), \]  

(1)

where \( x_i(t + 1) \) represents the value of variable \( i \) at the time \( t+1 \) as a Boolean function \( f_i \) of its \( n \) regulators \( x_1(t), \ldots, x_n(t) \) at the current time”.

In the Results section under subheading 'Non-hierarchical and non-unidirectional interactions greatly increases the dynamical diversity of pathways',

“Because the inputs follow the identity function, the minimum number of attractors is equal to 2|inputs|, where inputs is the set of inputs”.

should read:

“Because the inputs follow the identity function, the minimum number of attractors is equal to 2|inputs| where inputs is the set of inputs”.
