Patients referred for RHC for haemodynamic assessment (2014.02 – 2018.08) enrolled prospectively

EXCLUDED CASES:
- Heart Transplanted
- ARVC
- Constrictive pericarditis
- Normal hemodynamics
- Significant valve disease

Patients included in final analysis
n=249

PH (resting $\text{PAP}_M \geq 20 \text{ mmHg})
\text{n=184}

PAH (n=43)

PH-LHD (n=141)
Elevated $\text{PAWP}_M$ at rest or during exercise
