Supplemental figure 1. Generation of Sarm1-/- rats.

(A) The scheme indicates the deletion of Sarm1 exon 2 in Sarm1-/- rats. (B) gRNA sequences used to generate Sarm1-/- rats. (C) Western blot analysis to detect SARM1 expression in the brains of WT and Sarm1-/- rats. (D) Toluidine blue stained cross sections of sciatic nerve from WT and Sarm1-/- rats. Right panels present nerves at 7 days after transection, and left panels present control nerves from the contralateral side.
