Supplementary data

Table 5. Proportion (%) of women reporting good physical capacity (PC) and good subjective well-being (SW) after THA and TKA stratified by age at the time of arthroplasty

| Mean age | Proportion (%) | Postoperative time (years) |
|----------|----------------|-----------------------------|
|          | Good PC after THA | < 4 a | < 13 a |
| 70       | 76              | 64             |
| 64       | 83              | 64             |
| Good PC after TKA |
| 70       | 71              | 65             |
| 65       | 80              | 65             |
| Good SW after THA |
| 70       | 37              | 64             |
| 64       | 33              | 64             |
| Good SW after TKA |
| 70       | 29              | 65             |
| 65       | 41              | 65             |

* Postoperative time (years)
