Abstract
The evolution of information technology have rapidly increase the sophisticated online application where accommodates most activities of users. Information and communication technology nowadays has become the importance part of our life. Majority of us are depending on the technology. Agreed or not, we cannot denied that technology helps us a lots in our daily activities. Besides the usage of Information and Communication Technology (ICT), another thing that we need to know is about the privacy concern especially when it comes to the personal information. Nowadays, we used an online transaction for the daily life operation. Online banking, online games, social media networking such as facebook, instagram, twitter and so on are an example of social networking that we used in our daily life with the help of ICT. In fact, we actually expose our personal data by our own without prejudice. This article will identify the use of ICT, internet and social networking that affect the privacy concern of personal information.
