Table 3 - Maternal outcomes according to exposure to periodontal disease (PD) and severe periodontal disease (SPD), Botucatu city, São Paulo state, Brazil, 2016-2017 (n=138).

| Outcome                  | Periodontal disease (PD) | Severe PD |
|--------------------------|--------------------------|-----------|
|                          | OR¹ (IC 95%)             | P         |
| UTI²³                   | 1.34 (0.57-3.18)         | 0.496     |
| Vulvovaginitis³         | 1.06 (0.39-2.88)         | 0.901     |
| ³th trimester bleeding³ | 2.07 (0.51-8.45)         | 0.307     |
| Premature rupture of membrane⁴ | 2.62 (0.96-7.11) | 0.058 |
|                          | 2.44 (0.72-8.30)         | 0.150     |
|                          | 3.45 (0.93-12.79)        | 0.063     |
|                          | 1.89 (0.26-13.42)        | 0.523     |
|                          | 5.59 (1.36-22.92)        | 0.017     |

¹ Reference category in the regression analysis was the absence of PD; ² UTI = Urinary tract infection; ³ corrected for maternal age (years), level of education, number of pregnancies and smoking; ⁴ also corrected for UTI and vulvovaginitis.

* PD = Periodontal Disease; ** SPD = severe PD;
