Supplemental Figure 1. A. Image of chyle from an iLEC<sup>Kras</sup> mouse. B. Survival curves for iLEC<sup>Ctrl</sup> mice (n = 23) and iLEC<sup>Kras</sup> mice (n = 13). Mice were fed tamoxifen (2 µl of 25 mg/ml solution) from P0-P2. The median survival of iLEC<sup>Kras</sup> mice was 26 days. P < 0.0001; log-rank (Mantel-Cox) test.
