Supplementary figure 1: Consensus clustering identified two cervical cancer patient clusters. (A) Consensus clustering cumulative distribution function (CDF) for k=2 to 9; (B) relative change in area under CDF curve for k=2 to 9; (C) distribution of each sample when k ranges from 2 to 9.
**Supplementary figure 2:** The relationship between TMB and immune score (A), PD-L1 expression (B), riskscore (C) and cluster 1/2 (D).
