**Supplementary Table 1. Comparisons of Characteristics Between Women with Endometrial Pathology (Hyperplasia or Cancer) and Women with Endometrial Polyp at the Time of Biopsy**

| Variables                        | Polyp (n=114) | Hyperplasia or cancer (n=12) | p value | Cancer (n=5) | p value |
|----------------------------------|---------------|-----------------------------|---------|--------------|---------|
| Age at biopsy (yr)               | 44.9±4.5      | 47.1±5.3                    | 0.122   | 47.8±5.6     | 0.168   |
| Body mass index (kg/m²)          | 22.4±3.0      | 22.9±2.8                    | 0.594   | 22.4±3.4     | 0.974   |
| Parity, n                        | 1.3±0.9       | 1.4±1.1                     | 0.748   | 0.8±0.8      | 0.197   |
| Tamoxifen duration (days)        | 1097.2±911.1  | 1307.1±1752.8               | 0.260   | 1567.1±1092.0| 0.302   |
| Chemotherapy                     | 54 (47.4)     | 7 (58.3)                    | 0.474   | 5 (100.0)    | 0.021   |
| Abnormal uterine bleeding        | 21 (18.4)     | 10 (83.3)                   | <0.001  | 5 (100.0)    | <0.001  |
| Endometrial thickness (mm)       | 12.1±4.6      | 13.8±5.3                    | 0.235   | 17.9±5.7     | 0.007   |

Values are presented as mean±standard deviation or n (%).
